Innovative Data Integration and Conceptual Space Modeling for COVID, Cancer, and Cardiac Care Amy Neustein, Nathaniel Christen, 2022-01-18 In recent years scientific research and translation medicine have placed increased emphasis on computational methodology and data curation across many disciplines both to advance underlying science and to instantiate precision medicine protocols in the lab and in clinical practice The nexus of concerns related to oncology cardiology and virology SARS CoV 2 presents a fortuitous context within which to examine the theory and practice of biomedical data curation Innovative Data Integration and Conceptual Space Modeling for COVID Cancer and

Cardiac Care argues that a well rounded approach to data modeling should optimally embrace multiple perspectives inasmuch as data modeling is neither a purely formal nor a purely conceptual discipline but rather a hybrid of both On the one hand data models are designed for use by computer software components and are consequently constrained by the mechanistic demands of software environments data modeling strategies must accept the formal rigors imposed by unambiguous data sharing and query evaluation logic In particular data models are not well suited for software level deployment if such models do not translate seamlessly to clear strategies for querying data and ensuring data integrity as information is moved across multiple points On the other hand data modeling is likewise constrained by human conceptual tendencies because the information which is managed by databases and data networks is ultimately intended to be visualized utilized by humans as the end user Thus at the intersection of both formal and humanistic methodology data modeling takes on elements of both logico mathematical frameworks e g type systems and graph theory and conceptual philosophical paradigms e g linguistics and cognitive science The authors embrace this two sided aspect of data models by seeking non reductionistic points of convergence between formal and humanistic conceptual viewpoints and by leveraging biomedical contexts viz COVID Cancer and Cardiac Care so as to provide motivating examples and case studies in this volume Provides an analysis of how conceptual spaces and related cognitive linguistic approaches can inspire programming and query processing models Outlines the vital role that data modeling curation has played in significant medical breakthroughs Presents readers with an overview of how information management approaches intersect with precision medicine providing case studies of data modeling in concrete scientific practice Explores applications of image analysis and computer vision in the context of precision medicine Examines the role of technology in scientific publishing replication studies and dataset curation
