READ SAFETY DIRECTIONS BEFORE OPENING OR USING

For the control of certain brush and broadleaf species in native pastures, rights of way and commercial and industrial areas and for the control of certain broadleaf weeds in grass pastures and pasture renovations as per the Directions for Use.

SAFETY DIRECTIONS

May irritate the eyes and skin. Avoid contact with eyes and skin. **DO NOT** inhale dust or spray mist. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre (ph 13 11 26).
For further information refer to the Material Safety Data Sheet.

GENERAL INSTRUCTIONS

Always add a surfactant/wetting agent. (See section 'Use of Surfactant/Wetting Agent').

Allow weeds to recover from grazing before application. Docks and Sarsel in particular require fresh leaf growth for adequate uptake of chemical.

Some grasses will be damaged in pasture sprayed with the product and biomass production may be reduced for several months. Brush-Off™ used on established Perennial Phalaris and/or established Perennial Cocksfoot may cause temporary yellowing and some stunting. Brush-Off™ can severely damage introduced grass species. Brush-Off™ does not control/damage Silexgrass (*Vulpia* spp.), Barley grass (*Hardenberg* spp.), Brome grass (*Bromus* spp.) or Winter grass (*Poa* spp.).

ALL grasses and legumes can be damaged and/or removed by a Brush-Off™/glyphosate mixture.

Legumes will be removed from pasture if over-sprayed with Brush-Off™. Some crops are extremely sensitive to low concentrations of this product. See "Sprayer Clean-up" section.

Where treatment is delayed or where weeds are not actively growing due to adverse conditions, results may be slow to appear and weeds may only be stunted or suppressed.

Instructions specific for brush and herbaceous weed control:

Apply when bushes/plants are actively growing. Where treatment is delayed or bushes/plants are not actively growing due to adverse conditions (such as a period of prolonged dry weather) or if partial spray coverage occurs, results may be slow to appear and subsequent regrowth may occur.

Should regrowth occur, re-treatment at the recommended rate is advised.

Re-treatment of blackberries should only be undertaken once regrowth has reached one (1) metre tall - this may not be until two (2) years after the initial application.

For control of bushes previously sprayed with other brush control herbicides or for bushes which may have been burned or slashed ensure two (2) years has elapsed.

Due to the widespread picking of blackberries by the public, it is recommended that the product is not applied to bushes bearing mature fruit.

Instructions specific for treatment of pasture or pasture renovation:

Some seedlings may germinate after the break in the following year, particularly after cultivation.

The ungerminated clover seed bank is not affected by Brush-Off™ application. Clover vigour is often increased in the year following application where seed banks are reasonable. The seed set of clover in the year of application of Brush-Off™ will be significantly reduced particularly from the Winter-Spring application. This effect may impact on the clover seed bank therefore re-seeding may be necessary. Where clover seed banks are high re-seeding is not necessary.

For pasture topping situations a combination of Brush-Off™ plus glyphosate can be used, however the Crop Rotation recommendations should be observed. Refer to the Directions for Use section of each product for the appropriate rate and critical comments for the target weed spectrum.
