**Grafting as a Sustainable Means for Securing Yield Stability and Quality in Vegetable Crops** Marios Kyriacou, Giuseppe Colla, Youssef Rouphael, 2021-03-29 Vegetable growers around the world only collect on average half of the yield they would obtain under optimal conditions, known as yield potential. It is estimated that 60–70% of the yield gap is attributable to abiotic factors such as salinity, drought, suboptimal temperatures, nutritional deficiencies, flooding, waterlogging, heavy metals contamination, adverse soil pH and organic pollutants, while the remaining 30–40% is due to biotic factors, especially soilborne pathogens, foliar pathogens, arthropods and weeds. Under climate change forecasts, the pressure of biotic and abiotic stressors on yield is expected to rise and challenge further global food security. To meet global demand

several solutions have been proposed focusing on the breeding of varieties with greater yield potential but this one size fits all solution leads to limited benefits In order to overcome the current situation grafting of elite scion varieties onto vigorous rootstock varieties has been suggested as one of the most promising drives towards further yield stability Specifically the implementation of suitable rootstock scion environment combinations in Solanaceous tomato eggplant pepper and Cucurbitaceous melon watermelon melon high value crops represents an untapped opportunity to secure yield stability and reliability under biotic abiotic stresses This Special Issue invites Original Research Technology Reports Methods Opinions Perspectives Invited Reviews and Mini Reviews dissecting grafting as a sustainable agro technology for enhancing tolerance to abiotic stresses and reducing disease damage In addition the following are of interest potential contributions dealing with genetic resources for rootstock breeding practices and technologies of rootstock breeding and rootstock scion signaling as well as the physiological and molecular mechanisms underlying graft compatibility In addition the effect of grafting on vegetable quality practical applications and nursery management of grafted seedlings and specialty crops e g artichoke and bean will be considered within the general scope of the Special Issue We highly believe that this compilation of high standard scientific papers on the principles and practices of vegetable grafting will foster discussions within this important field
