Wieringa,2012-12-06 Designing and manufacturing structures of all kinds in an economic and a safe way is not possible without doing experimental stress analysis The modernity of structures with their higher reliability demands as well as today s more stringent safety rules and extreme environmental conditions necessitate the improvement of the measuring technique and the introduction of new ones Although theoretical mathematical analysis is improving enormously an example of which is the finite element model it cannot replace experimental analysis and vice versa Moreover the mathematical analysis needs more and more accurate parameter data which in turn need improved experimental investigations No one can do all those investigations on his own Exchange of knowledge and experience in experimental stress analysis is a necessity a thing acknowledged by every research worker Therefore the objective of the Permanent Committee for Stress Analysis PC SA is to promote the organization of conferences with the purpose disseminating new research and new measuring techniques as well as improvements in existing techniques and furthermore to promote the exchange of experiences of practical applications with techniques rhis Vlllth International Conference on Experimental Stress Analysis on behalf of the PC SA is one in a series which started in 1959 at Delft NL and was followed by conferences at Paris F Berlin W Cambridge K Udine I Munich FRG and Haifa Isr Such a Conference will be held in Europe every fourth year half way bewteen the IUTAM Congresses *Proceedings of the 3rd International Conference on Experimental and Computational Mechanics in*

Creating Lean Corporations Jeffrey Morgan, 2005-07-15 Many companies applying lean use a top down approach a person or small group defines the business process in general terms and progressively expands it into more detailed elements This method fails when the person or small group defining the process lacks the detailed knowledge of the tasks involved to sequence them correctly Creating Lean Corporations by Jeffrey Morgan however utilizes a bottom up approach in which the employees who perform the tasks are empowered to create and manage their own portions of the business process Each task is defined using a task model that indicates the input output relationships between tasks it dictates the sequence that the tasks should be performed within the business process This approach is essential for creating and improving business processes that are large and complex but still efficient The author presents three concepts in applying lean principles to an organization 1 Hierarchies for managing large complex systems and processes A template for all lean organizations is presented that allows functional horizontal and process oriented vertical groups to be integrated into a single organizational hierarchy where command and control is clear and direct 2 The use of process models to define the organization s business processes A standard method of process modeling that allows business processes to be represented

and managed as hierarchies The benefit of this approach is that process management is implemented in a hierarchical fashion where the level of detail increases as you move down the levels in the hierarchy 3 A lean bottom up approach to business process reengineering this works much better than traditional top down approaches on larger more complex business processes This lean approach was successfully applied at a major automotive manufacturing company and was awarded the Charles F Boss Kettering Award as one of the most important technological innovations in 2000 This book is for business process managers especially lean leaders who seek to reengineer their business processes using lean principles
