statistics textbook for environmental science It covers descriptive inferential and predictive statistics centred on the Generalized Linear Model The key idea behind this book is to approach statistical analyses from the perspective of maximum likelihood essentially treating most analyses as multiple regression problems The reader will be introduced to statistical distributions early on and will learn to deploy models suitable for the data at hand which in environmental science are often not normally distributed To make the initially steep learning curve more manageable each statistical chapter is followed by a walk through in a corresponding R based how to chapter which reviews the theory and applies it to environmental data In this way a coherent and expandable foundation in parametric statistics is laid which can be expanded in advanced courses The content has been field tested in several years of courses on statistics for Environmental Science Geography and Forestry taught at the University of Freiburg
