The Review of Reviews William Thomas Stead, 1898 *Brain Connectivity Analysis: Investigating Brain Disorders*
Barry Horwitz, Silvina G. Horovitz, In the last few years advances in human structural and functional neuroimaging fMRI PET EEG MEG have resulted in an explosion of studies investigating the anatomical and functional connectivity between different regions of the brain More and more studies have employed resting and task related connectivity analyses to assess functional interactions and diffusion weighted tractography to study white matter organization Many of these studies have addressed normal human function but recently a number of investigators have turned their attention to examining brain disorders The study of brain disorders is a complex endeavor not only does it require understanding the normal brain and the regions

involved in a particular function but also it needs a deeper understanding of brain networks and their dynamics This Research Topic will provide the scientific community with an overview of how to apply connectivity methods to study brain disease and with perspectives on what are the strength and limitations of each modality For this Research Topic we solicit both reviews and original research articles on the use of brain connectivity analysis with non human or human models to explore neurological psychiatric developmental and neurodegenerative disorders from a system perspective Connectivity studies that have focused on one or more of the following will be of particular interest 1 detection of abnormal functional structural connectivity 2 neural plasticity assessed by changes in connectivity in patients with brain disorders 3 assessment of therapy using connectivity measures 4 relation of connectivity changes to behavioral changes *Encyclopedic Dictionary of Pyrotechnics* K.L.
