

**Strategy 1: The Number Line**

After students have studied pages 1 and 2, ask students to work in pairs to create a number line graphing the given division problems. Once students have an understanding of how to label points, assign students to determine and graph points that represent the division quotients.

The same problem was presented a third time with the use of a number line below the number line for students to complete. This is presented as the second of two problems that students can complete for additional practice.

Page 2:

Problem 1: Number Line Problem with Division Equations

Each student has a number line graph to work. Students will represent equations that have division equations relating to that number line's number line. Students will graph and label the points that are marked on the number line. Once students are able to graph a point, have students write the division equation that represents the point on the number line.

1. The division equations are given below. Graph the points on the number line.

Problem 1:

Equation to Graph

Equation	Number	Graph	Equation
$10 \div 2$	5		
$12 \div 3$	4		
$15 \div 3$	5		
$18 \div 3$	6
