**Liability for Antitrust Law Infringements & Protection of IP Rights in Distribution** Pranvera Këllezi, Bruce Kilpatrick, Pierre Kobel, 2019-07-05. This book gathers international and national reports from across the globe on key questions in the field of antitrust and intellectual property. The first part discusses the allocation of liability for infringement of antitrust laws between corporations and individuals. The book explores the criminal or administrative sanctions available against corporations, companies or group of companies and individuals such as employees or directors. A detailed international report explores the major trends and challenges in this field and provides an excellent comparative study of this complex and challenging subject. The second part examines whether intellectual property rights are sufficiently protected to ensure a fair return on investments made by manufacturers and distributors. This question comes at a time where distribution is facing deep and radical changes with the Internet. To what extent this is an opportunity or a threat to the sustainability of distribution systems of differentiated and IP protected goods is the question. This book brings together the current legal responses across a number of European countries and elsewhere in the world, all summarised and elaborated in an international report. The book also includes the resolutions passed by the General Assembly of the International League of Competition Law (LIDC) following a debate on each of these topics which include proposed solutions and recommendations. The LIDC is a long standing international association that focuses on the interface between competition law and intellectual property law including unfair competition issues.

**A Problem of Fit** Phillip B. Levine, 2022-04-22 A critical examination of the complex system of college pricing how it works how it fails and how fixing it can help both students and universities How much does it cost to attend college in the United States today The answer is more complex than many realize College websites advertise a sticker price but uncovering the actual price the one after incorporating financial aid can be difficult for students and families This inherent uncertainty leads some students to forgo applying to colleges that would be the best fit for them or even not attend college at all The result is that millions of promising young people may lose out on one of society's greatest opportunities for social mobility Colleges suffer too losing prospective students and seeing lower enrollments and less socioeconomic diversity If markets require prices to function well then the American higher education system rife as it is with ambiguity in its pricing amounts to a market failure In A Problem of Fit economist Phillip B Levine explains why institutions charge the prices they do and discusses the role of financial aid systems in facilitating and discouraging access to college Affordability issues are real but price transparency is also part of the problem As Levine makes clear our conversations around affordability and free tuition miss a larger truth that the opacity of our current college financing systems is a primary driver of inequities in education and society In a clear eyed assessment of educational access and aid in a post COVID 19 economy A Problem of Fit offers a trenchant new argument for educational reforms that are well within

reach      **Commutative Justice** Carl David Mildener, 2020-02-17 This book develops a liberal theory of justice in exchange. It identifies the conditions that market exchanges need to fulfill to be just. It also addresses head on a consequentialist challenge to existing theories of exchange namely that in light of new harms faced at the global level we need to consider the combined consequences of millions of market exchanges to reach a final judgment about whether some individual exchange is just. The author argues that even if we accept this challenge the effect of it is minimal. For different reasons normatively problematic collective market outcomes like externalities monopolies violations of the Lockean proviso inequality and commodification do not pose particular problems to the justice of market exchanges. He outlines the various conditions a market exchange needs to fulfill to be considered just from a liberal background and in light of the new harms. Ultimately he shows it is not the market which is to blame if we want to tackle issues like global warming or global economic injustice we should not blindly follow the intuition that we best restrain and regulate markets. Commutative Justice is unique in its focus on justice in exchange rather than on end state distributive justice and the way in which it addresses the new harms we are facing today. It will be of interest to researchers and advanced students in philosophy politics and economics who are working on questions of economic justice.
