*Anti-Cancer N-Heterocyclic Carbene Complexes of Gold(III), Gold(I) and Platinum(II)* Taotao Zou, 2016-02-19 This thesis focuses on the development of gold and non classical platinum based anti cancer agents that display distinctively different anti cancer mechanisms compared to the commonly used cisplatin These metal complexes contain N heterocyclic carbene NHC ligands which are able to form strong M C NHC bonds conferring high stability and favorable lipophilicity reactivity and binding specificity of metal complexes on biomolecules The author demonstrates significant advances made in anti cancer gold III gold I and platinum II complexes Detailed chemical synthesis in vitro and or in vivo anti cancer activities are clearly presented including i a class of Au III complexes containing a highly fluorescent N N N ligand and NHC ligand that simultaneously act as fluorescent thiol switch on probes and anti cancer agents ii a dinuclear

gold I complex with a mixed diphosphine and bis NHC ligand displaying favorable stability and showing significant inhibition of tumor growth in two independent mice models with no observable side effects and iii a panel of stable luminescent cyclometalated platinum II complexes exhibiting high specificity to localize to the endoplasmic reticulum ER domain inducing ER stress and cell apoptosis These works highlight the clinical potential that gold and platinum complexes offer for cancer treatment

Gel Electrophoresis Sameh Magdeldin,2012-04-04 As a basic concept gel electrophoresis is a biotechnology technique in which macromolecules such as DNA RNA or protein are fractionated according to their physical properties such as molecular weight or charge These molecules are forced through a porous gel matrix under electric field enabling uncounted applications and uses Delivered between your hands a second book of this Gel electrophoresis series Gel Electrophoresis Advanced Techniques covers a part but not all applications of this versatile technique in both medical and life science fields We try to keep the contents of the book crisp and comprehensive and hope that it will receive overwhelming interest and deliver benefits and valuable information to the readers

*Applications of Mass Spectrometry in Life Safety* Crisan Popescu,Alina D. Zamfir,Nicolae Dinca,2008-09-02 Mass spectrometry MS along with its hyphenated techniques is capable of high throughput sensitivity accuracy and selectivity for the analysis of structure and composition of almost any product Like in electrophoresis MS separates molecules based on the mass to charge ratio In case of gel electrophoresis SDS PAGE a well known and efficient bioanalytical technique proteins bear negative charges but have the same charge density so proteins are separated according to their size Similarly in case of MS analysis proteins carry the same charge and are separated by their molecular weight Unlike SDS PAGE however modern ultra high resolution MS discerns very small mass differences and can resolve and completely identify in a single experiment species of the same nominal mass in complex biological mixtures Consequently MS can be used for the structural characterization identification and sensitive detection of mixtures of biomolecules or for assessing the quality of isolated proteins purity integrity or post translational modifications for example carbohydrates nucleic acids drugs metabolites pollutants etc In the post genome era MS is continuously developing as one of the most reliable analytical method for elucidating the structure of molecules originating from various biological matrices The potential of MS for high sensitive structural analyses became unsurpassable after the introduction of electrospray ESI and matrix assisted laser desorption ionization MALDI methods on one hand and the possibility to deduce in detail unknown biopolymer structures by highly accurate molecular mass measurement followed by sequencing using dissociation techniques based on multiple stage MS on the other
