Minerales no metálicos, rocas industriales y gemas de Bolivia Rivas Valenzuela Rivas V.,2002      **Minerales no metálicos, rocas industriales y gemas de Bolivia** Salomón Rivas Valenzuela,2002      **Minerales de Bolivia** Oscar Kempff,Sohrab Tawackoli,Werner H. Paar,2003      Estados de la investigación ,2008      *Geología Física Y Geología Histórica De Sudamérica* Edward Revollo,2019-09-19 Este libro tiene el objetivo de dar una introducción a los principios y conceptos básicos de la geología para todos aquellos que están interesados en aprender sobre todos los procesos que formaron y dieron forma a la Tierra desde su formación alrededor de 4 800 millones de años antes del presente. A P Los primeros geólogos se pusieron como tarea estudiar e interpretar estos procesos. Después de varios años de estudios pudieron contribuir a revelar la historia del planeta y el origen de la vida. Su trabajo fue la base para futuras generaciones de científicos que profundizaron e hicieron nuevos descubrimientos que han contribuido a la comprensión de nuestro planeta y dar una nueva visión acerca de su formación. Gracias a todos estos descubrimientos los geólogos al igual que armar un rompecabezas fueron capaces de poder poner todas las piezas juntas y revelaron como se formó el continente sudamericano el cual comenzó su historia en los primeros momentos de la formación de la corteza terrestre. Este trabajo compila todos esos estudios en un solo texto al mismo tiempo que se añaden nuevos aspectos que no fueron contemplados al principio. Desde el Arqueológico hasta el Cuaternario se tiene una evolución geológica que implica todos los procesos que modelaron la plataforma continental los descubrimientos en la paleontología de nuevas especies de dinosaurios como los Titanes de Ischigualasto Giganotosaurus medios y más. Nuevas variedades de insectos como longimanus Mickoleitia e invertebrados marinos. Entre los fósiles de plantas podemos verlos en los bosques petrificados de Puyango en Ecuador y Jaramillo en Argentina. Al igual que se habla de los drásticos cambios climáticos que afectaron a la ecología del continente con varias glaciaciones como la edad de hielo Faminniam durante el Carbonífero. La paleogeografía de Sud Am rica fue transformada muchas veces debido al movimiento de las placas tectónicas durante los últimos 3 800 millones de años antes del presente que dieron origen a la cadena volcánica de los Andes al igual que la generación de un punto caliente en la parte sur de Brasil durante el Cretácico. En el caso de los recursos naturales el magmatismo y tectonismo genera una gran cantidad de depósitos de minerales en los escudos precámbricos como el caso de la mina de hierro Bolívar en Venezuela las gemas preciosas como la mina de esmeraldas de Chivor en Colombia y muchos otros. Los centros de minerales importantes en la cordillera de los Andes fueron creados por las actividades tectónicas y magmáticas como es el caso de mina de plata de Potos en Bolivia que revitalizó la economía de Europa en los tiempos de la colonia la mina de cobre de Chuquibambilla en Chile que es una de las fuentes principales para la economía de ese país y la mina de carbón de Cerrejón en Colombia que es la mina más grande de carbón en el mundo. Los yacimientos de hidrocarburos son muy importantes también los más ricos se hallan localizados en la cuenca de Maracaibo convirtiendo a Venezuela en uno de los primeros exportadores de petróleo al mundo      **Compendio de**
