Philosophy of Chemistry Jaap Brakel,2000 This book addresses themes in the newly emerging discipline of philosophy of chemistry in particular issues in connection with discussions in general philosophy of science on natural kinds reduction and ceteris paribus laws The philosophical issue addressed in all chapters is the relation between on the one hand the manifest image the daily practice or common sense life form and on the other the scientific image both of which claim to be the final arbiter of everything With respect to chemistry the question raised is this Where does this branch of science fit in with the manifest or scientific image Most philosophers and chemists probably would reply unhesitatingly the scientific image The aim of this book is to raise doubts about that self evidence It is argued that chemistry is primarily the science of manifest substances whereas micro or submicro scientific talk though important useful and insightful does not change what matters namely the properties of manifest substances These manifest substances their properties and uses cannot be reduced to talk of molecules or solutions of the Schrödinger equation If submicroscopic quantum mechanics were to be wrong it would not affect all or any microlevel chemical knowledge of molecules If molecular chemistry were to be wrong it wouldn't disqualify knowledge of say water not at the macrolevel e.g. its viscosity at 50 °C nor at the pre or protoscientific manifest level e.g. ice is frozen water **Introduction to Process Calculations Stoichiometry** K.A. Handbook of Food Processing Equipment George D. Saravacos,Athanasios E. Kostaropoulos,2012-12-06 Recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations Relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant Significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants There is a need to relate advances in process engineering to process equipment and vice versa This book is an attempt to apply the established principles of transport phenomena and unit operations to the design selection and operation of food processing equipment Since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties description of some typical industrial units is necessary to understand the operating characteristics Approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data **Stoichiometry and Process**
