Mental Health Care for Elite Athletes Claudia L. Reardon, 2022-10-05 This book examines the nuances and specifications of mental health in elite athletes. It meets the market need for a reference that utilizes a narrow scope to focus on the unique nature of this demographic's mental health. It enriches the understanding and appreciation of mental health symptoms and disorders in elite athletes and thus the ability to appropriately address those issues. The book first addresses the essential topics necessary for an authoritative resource on mental health such as general mental health disorder symptoms, diagnoses, and treatment. Subsequent chapters then dive into the very specific issues affecting elite athletes including the adverse effects of overtraining, sports-related concussions, behavioral addictions, and psychological responses to injury and illness. Closing chapters then analyze mental health disorders and issues specific to diverse demographics such as youth athletes, Paralympic athletes, and athletes of various ethnic and religious backgrounds. Timely and essential, Mental Health Care for Elite Athletes is an invaluable reference for a variety of healthcare professionals who work with elite athletes and interested non-medical members of the athlete entourage such as coaches and family.

Educating Special Children Michael Farrell, 2013-06-19 Educating Special Children is the definitive guide to evidence-based practice and professionally informed approaches in provision for special children. Now in its second edition, this book outlines ideas of best practice that relate to various disabilities and disorders and helpfully discusses what might constitute effective provision. International in its scope, it explores issues surrounding communication disorders and autism and Asperger's Syndrome, developmental coordination disorders, reading, writing, and mathematics disorders, disorders of conduct, anxiety, and depression, attention deficit.

Sense of Agency: Examining Awareness of the Acting Self Nicole David, James W. Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one's own actions. This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self-consciousness. Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain. Even minor impairments in this ability profoundly affect the individual's functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances. Della Sala et al 1991, Franck et al 2001, Frith 2005, Sirigu et al 1999. But the sense of agency also plays a role for cultural and religious phenomena such as voodoo, superstition, and gambling in which individuals experience subjective control over objectively uncontrollable entities. Wegner 2003. Furthermore, it plays into ethical and law questions concerning responsibility and guilt. For these reasons, a better understanding of the sense of agency has been important for neuroscientists, clinicians, philosophers of mind, and the general society alike. Significant progress has been made in this regard. For example, philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency. Bayne 2011, Gallagher 2000, 2012, Pacherie 2008, Synofzik et al 2008, and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency. Chambon et al 2013, David et al 2007, Farrer

et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i e the what and when of agency processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions

Brain Mechanisms in Problem Solving and Intelligence Robert Thompson, Francis M. Crinella, Jen Yu, 2013-11-21 This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain One objective of this volume was to make these maps available in a single source Another was to provide a description of learning syndromes arising from local lesions to different parts of the brain
