Solidarities with the Non/Human, or, Posthumanism in Literature Stefan Herbrechter, 2024-11-18 This volume collects essays written over the last decade by one of the founders and leading figures of the theoretical movement of critical posthumanism The readings of literary texts gathered here from Shakespeare Keats Camus Vittorini Kundera Haushofer Atwood Eagleman Crace and DeLillo focus on posthumanist moments in which questions of postanthropocentrism and the nonhuman become prominent are negotiated and ultimately foreclosed They show how a deconstructively minded way of reading humanistically motivated texts can help making these texts relevant for our so called posthuman times In doing so these critical posthumanist readings demonstrate that literature remains one of the privileged cultural institutions and practices from which solidarities both with and between the human and nonhuman can be formed and negotiated

Information Theory And Evolution (2nd Edition) John Scales Avery, 2012-05-21 Information Theory and Evolution discusses the phenomenon of life including its origin and evolution and also human cultural evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems This paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources as the author will show The role of information in human cultural evolution is another focus of the book The first edition of Information Theory and Evolution made a strong impact on thought in the field by bringing together results from many disciplines The new second edition offers updated results based on reports of important new research in several areas including exciting new studies of the human mitochondrial and Y chromosomal DNA Another extensive discussion featured in the second edition is contained in a new appendix devoted to the relationship of entropy and Gibbs free energy to economics This appendix includes a review of the ideas of Alfred Lotka Frederick Soddy Nicholas Georgescu Roegen and Herman E Daly and discusses the relevance of these ideas to the current economic crisis The new edition discusses current research on the origin of life the distinction between thermodynamic information and cybernetic information new DNA research and

human prehistory developments in current information technology and the relationship between entropy and economics
