Pneumatic Conveying Peter Hilgraf, 2024-01-17 Bulk materials are processed and refined in many industrial plants They are transported back and forth between the various process steps If bulk materials are dust fine to coarse grained they can be transported pneumatically through pipelines with flowing gas over distances of several metres to several kilometres This book introduces the basics of pneumatic conveying the construction of plants and their operation The first three chapters deal with the physical properties of the bulk material and the conveying gas as well as their behaviour in gas solid systems The following chapter describes the application of these basics in pneumatic conveying starting with different flow forms via processes at the plug up to pressure loss in pneumatic conveying lines. The following sections are devoted among other things to calculation approaches for the transfer of test models to large scale systems as well as to modern dense phase conveying methods in which material to be conveyed moves at low speed in the form of threads plugs or flowing Separate chapters deal with the design of pneumatic conveying systems and various forms and causes of their wear The book offers calculation examples for many topics and is state of the art It is aimed at engineers plant constructors and operators of product lines with pneumatic conveying They benefit from the author's decades of experience in the development and design of plants with new conveying processes Sensor Signal and Information Processing III Wai Lok Woo, Bin Gao, 2021-02-05 In the current age of information explosion newly invented technological sensors and software are now tightly integrated with our everyday lives Many sensor processing algorithms have incorporated some forms of computational intelligence as part of their core framework in problem solving These algorithms have the capacity to generalize and discover knowledge for themselves and to learn new information whenever unseen data are captured The primary aim of sensor processing is to develop techniques to interpret understand and act on information contained in the data The interest of this book is in developing intelligent signal processing in order to pave the way for smart sensors This involves the mathematical advancement of nonlinear signal processing theory and its applications that extend far beyond traditional techniques It bridges the boundary between theory and application developing novel theoretically inspired methodologies targeting both longstanding and emergent signal processing applications. The topics range from phishing detection to integration of terrestrial laser scanning and from fault diagnosis to bio inspired filtering The book will appeal to established practitioners along with researchers and students in the emerging field of smart sensor signal processing Physica B + C., 1980
