Impacts of Landscape Change on Water Resources Manoj K. Jha, 2020-11-13 Changes in land use and land cover can have many drivers including population growth urbanization agriculture demand for food evolution of socio economic structure policy regulations and climate variability The impacts of these changes on water resources range from changes in water availability due to changes in losses of water to evapotranspiration and recharge to degradation of water quality increased erosion salinity chemical loadings and pathogens The impacts are manifested through

complex hydro bio geo climate characteristics which underscore the need for integrated scientific approaches to understand the impacts of landscape change on water resources Several techniques such as field studies long term monitoring remote sensing technologies and advanced modeling studies have contributed to better understanding the modes and mechanisms by which landscape changes impact water resources Such research studies can help unlock the complex interconnected influences of landscape on water resources in terms of quantity and quality at multiple spatial and temporal scales In this Special Issue we published a set of eight peer reviewed articles elaborating on some of the specific topics of landscape changes and associated impacts on water resources *Integrated Soil and Water Management: Selected Papers from 2016 International SWAT Conference* Karim Abbaspour,2018-03-15 This book is a printed edition of the Special Issue Integrated Soil and Water Management Selected Papers from 2016 International SWAT Conference that was published in *Water*
