*Human Impact on Ancient Environments* Charles L. Redman, 1999-10 Threats to biodiversity food shortages urban sprawl lessons for environmental problems that confront us today may well be found in the past The archaeological record contains hundreds of situations in which societies developed long term sustainable relationships with their environments and thousands in which the relationships were destructive Charles Redman demonstrates that much can be learned from an improved understanding of peoples who through seemingly rational decisions degraded their environments and threatened their own survival By discussing archaeological case studies from around the world from the deforestation of the Mayan lowlands to soil erosion in ancient Greece to the almost total depletion of resources on Easter Island Redman reveals the long range coevolution of culture and environment and clearly shows the impact that ancient peoples had on their world These case studies focus on four themes habitat transformation and animal extinctions agricultural practices urban growth and the forces that accompany complex society They show that humankind's commitment to agriculture has had cultural consequences that have conditioned our perception of the environment and reveal that societies before European contact did not necessarily live the utopian existences that have been popularly supposed Whereas most books on this topic tend to treat human societies as mere reactors to environmental stimuli Redman's volume shows them to be active participants in complex and evolving ecological relationships *Human Impact on Ancient Environments* demonstrates how archaeological research can provide unique insights into the nature of human stewardship of the Earth and can permanently alter the way we think about humans and the environment

*Ranching, Mining, and the Human Impact of Natural Resources Development* Raymond L. Gold, This book is intended for people interested in the environment American society rural and urban affairs social impact assessment and urban structures generally It is also aimed at industrial and community planners and natural resource development firms and formulated to implement a social policy concerning resource development and public agencies *Ranching Mining and the Human Impact of Natural Resources Development* reports and observes people whose lives have been importantly affected by industrialization of rural communities in the American West Such community change research is rarely done but is invaluable for its real world groundings for a variety of social science theories This study evolved out of ethnographic research of Western communities done over a full decade Initially performed to meet requirements for social impact analysis these studies have a much larger concern namely identifying those areas of social change that contribute to the standing of small communities and how they persist in the face of seemingly overwhelming odds of the highly advanced urban complex Professor Gold has written the first work which examines and accounts for the rise of local citizens groups to a sense of being a community Its account of this process covers both ordinarily slow and extraordinarily rapid areas of change in Western societies It places the *Gemeinschaft* in proper perspective as the foundation upon which all other aspects of community social structure are built In this regard it is a contribution to basic social theory showing clearly the

interrelation between small community and large society elements of the structure and functioning of community life The work is subtly textured combining structural cultural and symbolic perspectives in its account of the experience of the community of Sagebrush Gold s monograph is one of a kind No other book brings together the story of social effects of natural resource development projects in the American West
