Data Engineering for Cybersecurity James Bonifield, 2025-08-26 Turn raw logs into real intelligence Security teams rely on telemetry the continuous stream of logs events metrics and signals that reveal what's happening across systems endpoints and cloud services But that data doesn't organize itself It has to be collected normalized enriched and secured before it becomes useful That's where data engineering comes in In this hands on guide cybersecurity engineer James Bonifield teaches you how to design and build scalable secure data pipelines using free open source tools such as Filebeat Logstash Redis Kafka and Elasticsearch and more You'll learn how to collect telemetry from Windows including Sysmon and PowerShell events Linux files and syslog and streaming data from network and security appliances You'll then transform it into structured formats secure it in transit and automate your deployments using Ansible You'll also learn how to Encrypt and secure data in transit using TLS and SSH Centrally manage code and configuration files using Git Transform messy logs into structured events Enrich data with threat intelligence using Redis and Memcached Stream and centralize data at scale with Kafka Automate with Ansible for repeatable deployments Whether you're building a pipeline on a tight budget or deploying an enterprise scale system this book shows you how to centralize your security data support real time detection and lay the groundwork for incident response and long term forensics

*Advanced Penetration Testing* Wil Allsopp, 2017-02-27 Build a better defense against motivated organized professional attacks Advanced Penetration Testing Hacking the World's Most Secure Networks takes hacking far beyond Kali linux and Metasploit to provide a more complex attack simulation Featuring techniques not taught in any certification prep or covered by common defensive scanners this book integrates social engineering programming and vulnerability exploits into a multidisciplinary approach for targeting and compromising high security environments From discovering and creating attack vectors and moving unseen through a target enterprise to establishing command and exfiltrating data even from organizations without a direct Internet connection this guide contains the crucial techniques that provide a more accurate picture of your system's defense Custom coding examples use VBA Windows Scripting Host C Java JavaScript Flash and more with coverage of standard library applications and the use of scanning tools to bypass common defensive measures Typical penetration testing consists of low level hackers attacking a system with a list of known vulnerabilities and defenders preventing those hacks using an equally well known list of defensive

scans The professional hackers and nation states on the forefront of today's threats operate at a much more complex level and this book shows you how to defend your high security network Use targeted social engineering pretexts to create the initial compromise Leave a command and control structure in place for long term access Escalate privilege and breach networks operating systems and trust structures Infiltrate further using harvested credentials while expanding control Today's threats are organized professionally run and very much for profit Financial institutions health care organizations law enforcement government agencies and other high value targets need to harden their IT infrastructure and human capital against targeted advanced attacks from motivated professionals Advanced Penetration Testing goes beyond Kali linux and Metasploit and to provide you advanced pen testing for high security networks *Flex 3 Cookbook* Joshua J. **Turning Data into Insight with IBM Machine Learning for z/OS** Samantha Buhler, GuanJun Cai, John Goodyear, Edrian Irizarry, Nora Kissari, Zhuo Ling, Nicholas Marion, Aleksandr Petrov, Junfei Shen, Wanting Wang, He Sheng Yang, Dai Yi, Xavier Yuen, Hao Zhang, IBM Redbooks, 2018-09-11 The exponential growth in data over the last decade coupled with a drastic drop in cost of storage has enabled organizations to amass a large amount of data This vast data becomes the new natural resource that these organizations must tap in to innovate and stay ahead of the competition and they must do so in a secure environment that protects the data throughout its lifecycle and data access in real time at any time When it comes to security nothing can rival IBM Z the multi workload transactional platform that powers the core business processes of the majority of the Fortune 500 enterprises with unmatched security availability reliability and scalability With core transactions and data originating on IBM Z it simply makes sense for analytics to exist and run on the same platform For years some businesses chose to move their sensitive data off IBM Z to platforms that include data lakes Hadoop and warehouses for analytics processing However the massive growth of digital data the punishing cost of security exposures as well as the unprecedented demand for instant actionable intelligence from data in real time have convinced them to rethink that decision and instead embrace the strategy of data gravity for analytics At the core of data gravity is the conviction that analytics must exist and run where the data resides An IBM client eloquently compares this change in analytics strategy to a shift from moving the ocean to the boat to moving the boat to the ocean where the boat is the analytics and the ocean is the data IBM respects and invests heavily on data gravity because it recognizes the tremendous benefits that data gravity can deliver to you including reduced cost and minimized security risks IBM Machine Learning for z/OS is one of the offerings that decidedly move analytics to Z where your mission critical data resides In the inherently secure Z environment your machine learning scoring services can co exist with your transactional applications and data supporting high throughput and minimizing response time while delivering consistent service level agreements SLAs This book introduces Machine Learning for z/OS version 1.1.0 and describes its

unique value proposition It provides step by step guidance for you to get started with the program including best practices for capacity planning installation and configuration administration and operation Through a retail example the book shows how you can use the versatile and intuitive web user interface to quickly train build evaluate and deploy a model Most importantly it examines use cases across industries to illustrate how you can easily turn your massive data into valuable insights with Machine Learning for z OS
