

A detailed, colorful illustration of intestinal villi, which are finger-like projections of the mucosal lining of the small intestine. The villi are shown in cross-section, revealing their internal structure. They are colored in shades of blue, green, and yellow, with red outlines. The background is dark, making the villi stand out. The illustration is positioned at the top and bottom of the book cover, framing the title.

Pharmacology for Anesthetists 2, *Gut Feeling and Digestive Health in Nineteenth-Century Literature, History and Culture* Manon Mathias, Alison M. Moore, 2018-11-17 This book considers the historical and cultural origins of the gut brain relationship now evidenced in numerous scientific research fields. Bringing together eleven scholars with wide interdisciplinary expertise the volume examines literal and metaphorical digestion in different spheres of nineteenth century life. Digestive health is examined in three sections in relation to science politics and literature during the period focusing on Northern America Europe and Australia. Using diverse methodologies the essays demonstrate that the long nineteenth century was an important moment in the Western understanding and perception of the gastroenterological system and its relation to the mind in the sense of cognition mental wellbeing and the emotions. This collection explores how medical breakthroughs are often historically preceded by intuitive models imagined throughout a range of cultural productions.

Feminist Research for 21st-century Childhoods B. Denise Hodgins, 2019-03-21 This book is a collection of feminist childhood studies stories from field research with educators young children and/or early childhood student educators that explores the challenges tensions and possibilities of common worlds research methods for the 21st century. Grounded in a common worlding orientation the contributing authors grapple with complex methodological understandings within postqualitative practices within settler colonial states Australia Canada South Africa and the United States. Each chapter presents a method the authors have put to work in their efforts to unsettle the interpretative power of Euro Western developmental knowledges and anthropocentric frameworks to reimagine research amid the colonialist social and environmental challenges we face today. The researching stories act as provocations for generating innovative relational and emergent methods to attend to the complexity of 21st century childhoods. Just as developmental and sociological perspectives gave birth to new forms of inquiry within childhood studies in 19th century industrialization and 20th century urban change respectively the 21st century requires novel questions practices and methodologies to enhance the childhood studies lexicon. In the field of childhood studies where settler colonial and neoliberal logics have so much clout such strategies are crucial. Feminist Research for 21st century Childhoods is an important and relevant read for anyone working and researching with children.

Physiology and Medicine Ivan Y. Torshin, 2007

Several years have passed since the sequencing of the human genome and what might be called the post genomic era has begun. Of course there are many different genomes and the term post genomic does not necessarily imply the human genome. However it is the data encoded in the human genome that hold the promise to be of practical importance in a wide range of biomedical applications. The sequencing and preliminary annotations of the human genome provided an incredible amount of the raw largely unprocessed information. Coupled with the millions of publications on human physiology already available in public databases it is clear that certain informational strategies should be adopted for the retrieval analysis and representation of these data. Among biological sciences bioinformatics is a specific branch that deals with managing complexities in the biological information. However the bioinformatics is in no way restricted to the compilation of large databases or elaboration of sophisticated software. The methods of bioinformatics can greatly assist the generation of productive hypotheses that allow subsequent experimental testing followed by confirmation or disapproval. The main idea behind the present volume is not worrying about the steadily growing amounts of biomedical information or about the relative quality of it. This volume as well as the entire book series is based on the purpose oriented attitude how to make a good use of this information in particular research projects.

Evolution and the Emergent Self Raymond L. Neubauer, 2012. This book examines how humans evolved from the cosmos and prebiotic earth and what types of biological chemical and physical sciences drove this complex process. The author presents his view of nature which attributes the rising complexity of life to the continual increasing of information content first in genes and then in brains.

Black Transhuman Liberation Theology Philip Butler, 2019-12-12 Mediating Black religious studies spirituality studies and liberation theology Philip Butler explores what might happen if Black people in the United States merged technology and spirituality in their fight towards materializing liberating realities The discussions shaping what it means for humans to exist with technology and as part of technology are already underway transhumanism suggests that any use of technology to augment intellectual psychological or physical capability makes one transhuman In an attempt to encourage Black people in the United States to become technological progenitors as a spiritual act Butler asks whether anyone has ever been just human Butler then explores the implications of this question and its link to viewing the body as technology Re imagining incarnation as a relationship between vitality biochemistry and genetics the book also takes a critical scientific approach to understanding the biological embodiment of Black spiritual practices It shows how current and emerging technologies might align with the generative biological states of Black spiritualities in order to concretely disrupt and dismantle oppressive societal structures

Judaic Technologies of the Word Gabriel Levy, 2014-10-14 *Judaic Technologies of the Word* argues that Judaism does not exist in an abstract space of reflection Rather it exists both in artifacts of the material world such as texts and in the bodies brains hearts and minds of individual people More than this Judaic bodies and texts both oral and written connect and feed back on one another *Judaic Technologies of the Word* examines how technologies of literacy interact with bodies and minds over time The emergence of literacy is now understood to be a decisive factor in religious history and is central to the transformations that took place in the ancient Near East in the first millennium BCE This study employs insights from the cognitive sciences to pursue a deep history of Judaism one in which the distinctions between biology and culture begin to disappear
