Strain, Anna Mae Diehl, 1997-12-31 Nelson Fausto The Greek myth of Prometheus with its picture of a vulture feasting on its chained victim has traditionally provided a visual image of liver regeneration It is a powerful and frightening representation but if one were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table the outcome of the procedure would not differ significantly from that described by Greek poets Yet few of us who work in the field have stopped long enough to ask where this myth originated Did the poet observe a case of liver regeneration in a human being Was it brilliant intuition or perhaps literally just a gut feeling of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissue is removed This book does not attempt to solve these historical issues It does instead cover in detail some of the major modern themes of research on liver regeneration injury and repair As indicated in Dr N Bucher's chapter the modern phase of experimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two thirds resection of the liver of a rat The technique described has 3 remarkable features 1 it is highly reproducible resulting in the removal of 68% of the liver 2 it has minimal if any mortality and 3 it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue **15th WCEAM Proceedings** João Onofre Pereira Pinto, Marcio Luiz Magri Kimpara, Renata Rezende Reis, Turuna Seecharan, Belle R.
