Contracts for Infrastructure Projects Philip Loots,Donald Charrett,2022-05-18 Contracts for Infrastructure Projects An International Guide provides a guide to the law relating to construction contracts for infrastructure projects it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts to enable them to understand the risks involved and how to minimise them The principles of construction law outlined in this book apply to small

construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars. The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment. Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain. However, where legislation impacts on the execution of construction projects or the operation of construction contracts, it may be of major importance in protecting the rights of weaker parties or third parties. It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law. To the extent possible, the emphasis is on general principles of contract law that are widely accepted in many jurisdictions. Examples are drawn from case law in a number of common law jurisdictions as well as from civil codes.

The New Engineering Contract Arthur McInnis, 2001. The introduction of the New Engineering Contract (NEC) encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form. The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract. It is believed that these features reduce adversariality and disputes. The NEC seeks to achieve this aim primarily through co-operative management techniques and incentives built into the NEC's procedures. This commentary analyses and evaluates these and related claims of innovation. The New Engineering Contract: A legal commentary examines the background to the NEC, its design objectives, structure, procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them. Throughout the detailed commentary upon the NEC clauses, comparisons to the traditional forms are also made to highlight unique features and principles of general application. The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract, addresses many of their shortcomings and offers one of the best models for their future development, direction and design. The commentary draws upon the body of the project management literature and legal analysis to support its conclusions. The New Engineering Contract: A legal commentary will be essential reading for lawyers, barristers and solicitors as well as engineers and project managers.
