

## Digitization / Fluid Power 4.0

**Industrie 4.0 (IoT) is one of the capital topics for the industry**

Digitized value chains require products and components that can reliably communicate with each other in a wide variety of applications; users expect the highest degree of interoperability. Therefore, the Fluid Power association, together with its member companies, has developed a standardization strategy for universal digital communication that implements a variety of activities at national and international level.

To enable data exchange, the physical fluid power product must be available digitally as a so-called digital twin. The central building block for implementing the digital twin is the asset administration shell. The digital twin enables compatibility at all levels of industrial automation, but also with interfaces and protocols such as OPC UA. It thus forms the digital link between product and user or between component and machine.
