Introducing the Sociology of Food and Eating Anne Murcott, 2019-02-07 This textbook equips students with the ability to analyze and think critically about contemporary food topics. A thorough introduction to the sociology of food and eating, the book also acts as a primer to the discipline of sociology more generally. Chapters start with a common sense assumption about food which students frequently encounter in their own lives or in the mass media. Topics include family meals, ethnic cuisines, cooking skills and convenience foods, eating out, food waste and overpackaging. Anne Murcott shows how systematic academic research approaches can allow students to move beyond conventional wisdoms to examine sociological perspectives on food and eating. Key sociological concerns such as class, gender, age, ethnicity, power and identity are also introduced, accompanied by a wide range of examples from around the globe. By the end, readers will be able to think more critically and to apply sociological approaches to questions about food and society. *Introducing the Sociology of Food and Eating* is an essential introductory textbook for students in sociology and food studies. It provides readers with a solid basis for success in their studies and with a new understanding of their own attitudes to food and eating.

The Essence of Japanese Cuisine Michael Ashkenazi, Jeanne Jacob, 2013-10-11 The past few years have shown a growing interest in cooking and food as a result of international food issues such as BSE, world trade and mass foreign travel, and at the same time there has been growing interest in Japanese Studies since the 1970s. This volume brings together the two interests of Japan and food, examining both from a number of perspectives. The book reflects on the social and cultural side of Japanese food and at the same time reflects also on the ways in which Japanese culture has been affected by food, a basic human institution. Providing the reader with the historical and social bases to understand how Japanese cuisine has been and is being shaped, this book assumes minimal familiarity with Japanese society but instead explores the country through the topic of its cuisine.

Food Safety and the WTO: The Interplay of Culture, Science and Technology Marsha Echols, 2001-11-16 Today's international trade regime explicitly rejects cultural perceptions of what is safe to eat, overturning millennia of tradition. The World Trade Organization (WTO) Agreement on the Application of Sanitary and Phytosanitary Measures (SPS) enshrines science as the arbiter in resolving disputes involving this vital human need. This mandate, however, is under attack from many quarters. Critics cite environmental and ethical concerns, unpredictably changing technology, taste, food preferences, local

culture adequacy of governmental implementation of WTO standards and the reliability of scientific opinion A basic conflict has crystallized food as culture versus food as commerce The WTO SPS approach is increasingly challenged for its balance in favor of economic considerations and for its visible undermining of unique cultural identities This important book explores the relationship between the SPS Agreement food traditions science and technology It deliberately confronts those trade experts who refuse to allow other social sciences to influence their economics based trade theory The author ably investigates the local perception of food and food safety from the anthropological and historical points of view the evolution of food production technologies and the medicinal proscriptive taboo and security aspects of food that continue to prevail in nearly all cultures today She succeeds in demonstrating that no matter how strong the faith in science and economics it is unwise to flagrantly dismiss the deeply rooted beliefs of billions of people a huge majority of the world's population The Beef Hormones case the remaining sovereignty related to food safety measures the increasing significance of appropriate levels of protection and the precautionary principle the redefinition of food hazard to include production processes as well as food itself genetically modified seeds and food products the concept of risk in the science based context of the Codex Alimentarius these are among the issues and topics covered in depth The author concludes that although quick legal resolutions of trade disputes about what people should or should not eat might provide a win for open trade support for the entire structure and rationale of the WTO is undermined unless at the least some flexibility of interpretation is introduced into the WTO Dispute Resolution System in order to recognize the weight and validity of public opinion Food safety is arguably the most important issue affecting international commerce today urgently demanding enlightened discussion and action based on global consensus This well researched and thoughtful contribution offers significant clarification and perspective to policymakers lawyers academics and others engaged in this critical human drama in progress on the world stage

Cuisine and Empire Rachel Laudan, 2013-11-21

Rachel Laudan tells the remarkable story of the rise and fall of the world's great cuisines from the mastery of grain cooking some twenty thousand years ago to the present in this superbly researched book Probing beneath the apparent confusion of dozens of cuisines to reveal the underlying simplicity of the culinary family tree she shows how periodic seismic shifts in culinary philosophy beliefs about health the economy politics society and the gods prompted the construction of new cuisines a handful of which chosen as the cuisines of empires came to dominate the globe Cuisine and Empire shows how merchants missionaries and the military took cuisines over mountains oceans deserts and across political frontiers Laudan's innovative narrative treats cuisine like language clothing or architecture as something constructed by humans By emphasizing how cooking turns farm products into food and by taking the globe rather than the nation as the stage she challenges the agrarian romantic and nationalistic myths that underlie the contemporary food movement
