Fouling Control Hempel:

Advances in Marine Antifouling Coatings and Technologies Claire Hellio, Diego Yebra, 2009-05-22 Marine biofouling can be defined as the undesirable accumulation of microorganisms algae and animals on structures submerged in seawater From the dawn of navigation marine biofouling has been a major problem for shipping in such areas as reduced speed higher fuel consumption and increased corrosion It also affects industries using off shore structures such as oil and gas production and aquaculture Growing concerns about the environmental impact of antifouling coatings has led to major new research to develop more environmentally friendly alternatives *Advances in marine antifouling coatings and technologies* summaries this wealth of research and its practical implications This book is divided into four sub sections which discuss marine fouling organisms and their impact testing and development of antifouling coatings developments in chemically active marine antifouling technologies and new surface approaches to the control of marine biofouling It provides an authoritative overview of the recent advances in understanding the biology of fouling organisms the latest developments on antifouling screening techniques both in the field and in the laboratory research on safer active compounds and the progress on nontoxic coatings with tailor made surface properties With its distinguished editors and international team of contributors *Advances in marine antifouling coatings and technologies* is a standard reference for manufacturers of marine antifouling solutions the shipping industry oil and gas producers aquaculture and other industries using offshore structures and academics researching this important area Assesses marine antifouling organisms and their impact including a historical review and directions for future research Discusses developments in antifouling coatings examining chemically active and new surface approaches Reviews the environmentally friendly alternative of safer active compounds and the progress of non toxic compounds Biofouling Simone Dürr, Jeremy C. Thomason, 2009-12-21 Biofouling the colonisation of an interface by a diverse array of organisms is almost always a problem where it occurs as it negatively affects surfaces the materials that they are made from and the structures that they form and can even destroy them This comprehensive book covers in detail in its first section the processes involved in marine freshwater and medical biofouling including coverage of settlement by larvae and spores biofouling community processes epibiosis biofouling on living organisms and microbial fouling including biofilms deleterious to human health The book s second section encompassing biofouling processes with industrial implications includes coverage of biofouling on artificial substrata paints and coatings technology for the control of marine biofouling biofouling and antifouling in the maritime industries such as shipping offshore oil and aquaculture and in power stations and other industries The impacts of both biofouling and biofouling control and details of current legislation of relevance to biofouling issues are fully covered The book s final section looks at methods for the measurement of biofouling and future prospects for biofouling including in depth coverage of the changes anticipated in biofouling worldwide due to global climate change and likely future directions in antifouling research technology and legislation Biofouling which includes contributions from many

international experts is an essential reference for all those working in the antifouling industry including those involved in formulation of antifouling products such as paints and other coatings Aquatic biologists ecologists environmental scientists and lawyers marine engineers aquaculture personnel chemists and medical researchers will all find much of interest within this book All universities and research establishments where these subjects are studied and taught should have copies of this important work on their shelves

edition the chapters have been updated to cover the recently emerged issues. Particularly the book presents the current status of the technology including market drivers, restraints, and development trends. Process fundamentals, both the biological and membrane components, have received in-depth coverage in the new edition. A new chapter has been added to provide a stronger focus on reuse applications in general and the decisive role of MBR in the entire reuse chain. The second edition also comes with a new chapter containing practical design problems to complement the concepts communicated throughout the book. Other distinguishing features of the new edition are coverage of novel developments and hybrid processes for specialised wastewaters, energy efficiency, and sustainability of the process, aspects of MBR process automation, and recent material on case studies. The new edition is a valuable reference to the academic and professional community and suitable for undergraduate and postgraduate teaching in Environmental Engineering, Chemical Engineering, and Biotechnology.
