**A Polygeneration Process Concept for Hybrid Solar and Biomass Power Plant** Umakanta Sahoo, 2018-08-03. This is the most comprehensive and in depth study of the theory and practical applications of a new and groundbreaking method for the energy industry to go green with renewable and alternative energy sources. The global warming phenomenon as a significant sustainability issue is gaining worldwide support for development of renewable energy technologies. The term polygeneration is referred to as an energy supply system which delivers more than one form of energy to the final user. For example, electricity, cooling and desalination can be delivered from a polygeneration process. The polygeneration process in a hybrid solar thermal power plant can deliver electricity with less impact on the environment compared to a conventional fossil fuel based power generating system. It is also THE next generation energy production technique with the potential to overcome the undesirable intermittence of renewable energy systems. In this study, the polygeneration process, simultaneous production of power, vapor, absorption refrigeration, VAR cooling and multi effect humidification and dehumidification, MEHD desalination system from different heat sources in hybrid solar biomass HSB system with higher energy efficiencies, energy and exergy, primary energy savings, PES and payback period are investigated focusing on several aspects associated with hybrid solar biomass power generation installations such as wide availability of biomass resources and solar direct normal irradiance DNI and other technologies. Thermodynamic evaluation, energy and exergy of HSB power has also been investigated along with the VAR cooling system, the modelling, simulation, optimization and cost analysis of the polygeneration hybrid solar biomass system, all accompanied by multiple case studies and examples for practical applications. This volume provides the researcher, student and engineer with the intellectual tool needed for understanding new ideas in this rapidly emerging field. The book is also intended to serve as a general source and reference book for the professional consultant, designer, contractor etc. who is

working in the field of solar thermal biomass power plant polygeneration cooling and process heat It is a must have for anyone working in this field      **Utility-scale Solar Photovoltaic Power Plants** ,2015      **Solar Photovoltaic Projects in the Mainstream Power Market** Philip Wolfe,2024-10-14 Develop large scale solar photovoltaic projects with this book to feed power into a grid Contains case studies of the Waldpolenz Energy Park Germany Lopburi Solar Plant in Thailand and what will be the world s largest PV plant the Topaz Solar Farm in California Also included are interviews from leading figures in the PV industry
