**Poultry value chain and cluster development in Papua New Guinea: Insights from a recent field study** Fang, Peixun,Gimiseve, Harry,Mukerjee, Rishabh,Schmidt, Emily,Zhang, Xiaobo,2024-10-07 Despite poultry being lauded as a relatively affordable source of protein and micronutrients in many lower income countries chicken meat is twice as expensive in PNG compared to nearby Southeast Asian countries Recent rural household consumption data collected by the International Food Policy Research Institute IFPRI suggests that an important share of households do not eat enough protein to meet healthy dietary guidelines Schmidt et al 2024 Poultry along with fish and pork are the three most important animal source protein foods in the country yet these products remain financially prohibitive to a large share of the population This paper explores the unique challenges and opportunities within PNG s poultry sector using a growth diagnostic approach pioneered by Rodrik 2010 Through interviews with key stakeholders across the poultry value chain we found that while high feed costs persist as a significant challenge poultry farmers have yet to adopt additional cost reduction strategies such as establishing small scale regional feed mills utilizing local feed ingredients and diversifying feed and input imports An intriguing puzzle of PNG s poultry sector is the limited number of small scale producers successfully transitioning to medium scale operations This primarily stems from high transport costs and restricted access to input and sales markets The challenges of marketing chicken in PNG have received less attention than production Drawing on the experiences of successful models in other countries and considering the specific situation of PNG s poultry sector fostering poultry production and processing clusters e g in Lae suburban areas emerges as a potential strategy to address production transportation and marketing constraints By concentrating production value chain clustering can enhance access to essential services e g slaughtering and cold storage improve market access and reduce overall costs While clustering holds promise for PNG s poultry value chain its success hinges upon joint action between the public and private sectors as well as NGOs operating within the value chain

**Seafood Choices** Institute of Medicine,Food and Nutrition Board,Committee on Nutrient Relationships in Seafood: Selections to Balance Benefits and Risks,2007-03-09 The fragmented information that consumers receive about the nutritional value and health risks associated with fish and shellfish can result in confusion or misperceptions about these food sources Consumers are therefore confronted with a dilemma they are told that seafood is

good for them and should be consumed in large amounts while at the same time the federal government and most states have issued advisories urging caution in the consumption of certain species or seafood from specific waters Seafood Choices carefully explores the decision making process for selecting seafood by assessing the evidence on availability of specific nutrients compared to other food sources to obtain the greatest nutritional benefits The book prioritizes the potential for adverse health effects from both naturally occurring and introduced toxicants in seafood assesses evidence on the availability of specific nutrients in seafood compared to other food sources determines the impact of modifying food choices to reduce intake of toxicants on nutrient intake and nutritional status within the U S population develops a decision path for U S consumers to weigh their seafood choices to obtain nutritional benefits balanced against exposure risks and identifies data gaps and recommendations for future research The information provided in this book will benefit food technologists food manufacturers nutritionists and those involved in health professions making nutritional recommendations
