Accounting for Value Stephen Penman, 2010-12-30 Accounting for Value teaches investors and analysts how to handle accounting in evaluating equity investments The book's novel approach shows that valuation and accounting are much the same valuation is actually a matter of accounting for value Laying aside many of the tools of modern finance the cost of capital the CAPM and discounted cash flow analysis Stephen Penman returns to the common sense principles that have long guided fundamental investing price is what you pay but value is what you get the risk in investing is the risk of

paying too much anchor on what you know rather than speculation and beware of paying too much for speculative growth Penman puts these ideas in touch with the quantification supplied by accounting producing practical tools for the intelligent investor Accounting for value provides protection from paying too much for a stock and clues the investor in to the likely return from buying growth Strikingly the analysis finesses the need to calculate a cost of capital which often frustrates the application of modern valuation techniques Accounting for value recasts value versus growth investing and explains such curiosities as why earnings to price and book to price ratios predict stock returns By the end of the book Penman has the intelligent investor thinking like an intelligent accountant better equipped to handle the bubbles and crashes of our time For accounting regulators Penman also prescribes a formula for intelligent accounting reform engaging with such controversial issues as fair value accounting

Wilson, 2013-09-13 When marketing managers and financial managers join forces within any business the result can often be poor communication on financial criteria and goals The risk of this situation occurring is inevitably present when those with different professional backgrounds and roles are working in accordance with their own norms In his seminal 1956 paper on general systems theory the economist Kenneth Boulding referred to the phenomenon of specialised ears and generalised deafness which can be seen to exist when marketing managers are financially illiterate or when financial managers lack the necessary insights to design implement and operate accounting systems which are useful to marketing managers in carrying out their roles It is increasingly difficult to attach credence to the idea of marketing managers who lack financial skills or financial managers who fail to relate to the context in which marketing managers operate Understanding the marketing accounting interface is therefore important in generating emergent properties from the interaction of marketers and accountants whereby the whole is greater than the sum of the parts The chapters in this volume seek to address this challenge This book was originally published as a special issue of the Journal of Marketing Management **CFA Program**
