Field, 2023-08-17 An accessible and practical guide to the use of applied regression models in testing and evaluating hypotheses dealing with social relationships with example applications using relevant statistical methods in both Stata and R *Interaction Effects in Multiple Regression* James Jaccard, Robert Turrissi, 2003-03-05 This is a practical introduction to conducting analyses of interaction effects in the context of multiple regression This new edition expands coverage on the analysis of three way interactions in multiple regression analysis *An Application of Stein's Method to the Problem of Single Period Control of Regression Models* Stanford University. Jāmāna, 1977 **Interaction Effects in Multiple Regression** James Jaccard, Robert Turrissi, Choi K Wan, 1990-02-01 A synthesis of literature previously scattered across several disciplines this volume addresses fundamental issues in the analysis of interaction effects in multiple regression with examples from different fields in the social sciences It is organized around three core questions one given sample data can we conclude that there is an interaction effect in a population Two if so what is the strength of that effect And three what is the nature of that effect Modern Applied Regressions Jun Xu, 2022-12-08 Modern Applied Regressions creates an intricate and colorful mural with mosaics of categorical and limited response variable CLRV models using both Bayesian and Frequentist approaches Written for graduate students junior researchers and quantitative analysts in behavioral health and social sciences this text provides details for doing Bayesian and frequentist data analysis of CLRV models Each chapter can be read and studied separately with R coding snippets and template interpretation for easy replication Along with the doing part the text provides basic and accessible statistical theories behind these models and uses a narrative style to recount their origins and evolution This book first scaffolds both Bayesian and frequentist paradigms for regression analysis and then moves onto different types of categorical and limited response variable models including binary ordered multinomial count and survival regression Each of the middle four chapters discusses a major type of CLRV regression that subsumes an array of important variants and extensions The discussion of all major types usually begins with the history and evolution of the prototypical model followed by the formulation of basic statistical properties and an elaboration on the doing part of the model and its extension The doing part typically includes R codes results and their interpretation The last chapter discusses advanced modeling and predictive techniques multilevel modeling causal inference and propensity score analysis and

machine learning that are largely built with the toolkits designed for the CLRV models previously covered The online resources for this book including R and Stan codes and supplementary notes can be accessed at <https://sites.google.com/site/socjunxu/home/statistics/modern-applied-regressions>
