Forensic Facial Reconstruction Caroline Wilkinson, 2004-05-13 Forensic facial reconstruction is the reproduction of an individual's face from skeletal remains. Used when other forms of identification are very difficult or impossible, it can give a name to the dead in forensic cases or in archaeological contexts, provide a tangible impression of real individuals from our past. This comprehensive work starts with a discussion of the importance of the face in society and the history of facial reconstruction, going on to evaluate the accuracy of modern reconstruction methods. The Manchester method of facial reconstruction and the relationships between the hard and soft tissues of the face are described in detail. Uniquely, it also describes the methods and problems associated with reconstructing the faces of children. Collating all published facial tissue data and describing tissue variations with reference to age, sex, stature, and ethnic origin, this book will be an important reference volume for all practitioners in the field.

Craniofacial Identification Caroline Wilkinson, Christopher Rynn, 2012-05-03 The promotion of CCTV surveillance and identity cards, along with ever-heightened security at airports, immigration control, and institutional access, has seen a dramatic increase in the use of automated and manual recognition. In addition, several recent disasters have highlighted the problems and challenges associated with current disaster victim identification. Discussing the latest advances and key research into identification from the face and skull, this book draws together a wide range of elements relating to craniofacial analysis and identification. It examines all aspects of facial identification, including the determination of facial appearance from the skull, comparison of the skull with the face, and the verification of living facial images. With sections covering the identification of the dead and of the living, it provides a valuable review of the current state of play, along with the latest research advances in this constantly evolving field.
