Richard T. G. Walsh, Thomas Teo, Angelina Baydala, 2014-03-20 In line with the British Psychological Society s recent recommendations for teaching the history of psychology this comprehensive undergraduate textbook emphasizes the

philosophical cultural and social elements that influenced psychology's development. The authors demonstrate that psychology is both a human i.e. psychoanalytic or phenomenological and natural i.e. cognitive science exploring broad social historical and philosophical themes such as the role of diverse cultures and women in psychology and the complex relationship between objectivity and subjectivity in the development of psychological knowledge. The result is a fresh and balanced perspective on what has traditionally been viewed as the collected achievements of a few great men. With a variety of learning features including case studies, study questions, thought experiments and a glossary, this new textbook encourages students to critically engage with chapter material and analyze themes and topics within a social historical and philosophical framework.

Ambient Intelligence Giuseppe Riva, 2005. The metaphor of Ambient Intelligence (AmI) tries to picture a vision of the future where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs. Ambient Intelligence without invasion of privacy represents a long term vision for the EU Information Society Technologies Research programme. A strong multi disciplinary and collaborative approach is a key requirement for large scale technology innovation and the development of effective applications. Up to now most of the books and papers related to AmI focus their analysis on the technology potential only. An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence. Presence, the sense of being there, is the experience of projecting one's mind through media to other places, people and designed environments. The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding. The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications. More in detail, this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI.
