Loneliness: Human Nature and the Need for Social Connection John T. Cacioppo, William Patrick, 2008-08-17 Based on groundbreaking research showing that prolonged loneliness can be as harmful to your health as smoking Loneliness is one of the most important books about the human condition to appear in a decade Daniel Gilbert author of *Stumbling on Happiness* University of Chicago social neuroscientist John T Cacioppo pioneered research on the startling effects of loneliness a sense of isolation or social rejection disrupts not only our ability to think and will power but also our immune systems and can be as damaging as obesity or smoking On the flip side social connection can be a powerful therapy Cacioppo s sophisticated studies relying on brain imaging analysis of blood pressure immune response stress hormones behavior and even gene expression show that human beings are simply far more intertwined and interdependent physiologically as well as psychologically than our cultural assumptions have ever allowed us to acknowledge Loneliness traces the evolution of these tandem forces showing how for our primitive ancestors survival depended not on greater brawn but on greater commitments to each other Serving as a prompt to repair frayed social bonds the pain of loneliness engendered a fear response so powerfully disruptive that even now millions of years later a persistent sense of rejection or isolation can impair DNA transcription in our immune cells This disruption also impairs our ability to read social signals and exercise social skills as well as limits our ability to internally regulate our emotions all of which can combine to trap us in self defeating behaviors that reinforce the very isolation and rejection that we dread Loneliness shows us how to overcome this feedback loop to achieve better health and greater happiness As individuals and as a society we have everything to gain and everything to lose in how well or how poorly we manage our need for social bonds
