Incentives for Public Investment Under Fiscal Rules Jack M. Mintz,Michael Smart,2006 The authors explore the relationship between fiscal rules and capital budgeting The current budgetary approach to limit deficits to a fixed portion of GDP or to balance budgets could undermine incentives to invest in public capital with long run returns since politicians concerned about electoral prospects would favor expenditures providing immediate benefits to their voters An alternative budgetary approach is to separate capital from current revenues and expenditures and relax fiscal constraints by allowing governments to finance capital expenditures with debt as suggested by the golden rule approach to capital funding But the effect of capital budgeting would be to provide opportunities to politicians to escape the fiscal rule constraints by shifting current expenditures into capital accounts that are difficult to measure properly thereby leading to increased borrowing As an alternative the authors propose a modified golden rule limiting debt finance to a proportion of the government's investment in self liquidating assets
