1. The Sun is millions of kilometers away. How can heat from the Sun get here?
Answers will vary. [In fact, the Sun is so hot that it glows, and that light (radiation) heats the Earth.]
2. If you look inside an electric stove or toaster oven, how can you tell whether it's turned on?
The burner or heating element will glow. [These items glow because they are very hot, just as the filament in an incandescent bulb does.]

Gizmo Warm-up

In the *Radiation* Gizmo, you can focus the light of a super-powerful flashlight upon a kernel of popcorn and see what happens. The lens, which focuses the light, can be moved to the left or right.

1. The **Temperature** slider controls the heat of the metal **filament** inside the light. Scientists use the **Kelvin scale** to measure the temperature of a light filament. It is like the Celsius scale except 0 K (absolute zero) is the coldest anything can ever be.

Slowly move the **Temperature** slider all the way to the right. What happens?

The color of the light changes from red to orange to yellowish-white.

The light energy emitted by the flashlight is called **radiation**.

2. Slide the lens so the distance to the flashlight is 40 cm. Press **Play** (). What happens?
The kernel pops. [It takes 1.2 seconds to pop at the maximum temperature.]
3. Do you think the kernel will pop if you place cardboard in front of the flashlight? *Predictions will vary.*
4. Click **Reset** (). At the top of the Gizmo, next to **Obstacle**, select **Cardboard**. Press **Play**.
What happens? *Nothing—the kernel never pops.*
