**Composing Electronic Music** Curtis Roads,2015-06-17 Electronic music evokes new sensations feelings and thoughts in both composers and listeners Opening the door to an unlimited universe of sound it engages spatialization as an integral aspect of composition and focuses on sound transformation as a core structural strategy In this new domain pitch occurs as a flowing and ephemeral substance that can be bent modulated or dissolved into noise Similarly time occurs not merely as a fixed duration subdivided by ratios but as a plastic medium that can be generated modulated reversed warped scrambled and granulated Envelope and waveform undulations on all time scales interweave to generate form The power of algorithmic methods amplify the capabilities of music technology Taken together these constitute game changing possibilities This convergence of technical and aesthetic trends prompts the need for a new text focused on the opportunities of a sound oriented multiscale approach to composition of electronic music Sound oriented means a practice that takes place in the

presence of sound Multiscale means an approach that takes into account the perceptual and physical reality of multiple interacting time scales each of which can be composed After more than a century of research and development now is an appropriate moment to step back and reevaluate all that has changed under the ground of artistic practice Composing Electronic Music outlines a new theory of composition based on the toolkit of electronic music techniques The theory consists of a framework of concepts and a vocabulary of terms describing musical materials their transformation and their organization Central to this discourse is the notion of narrative structure in composition how sounds are born interact transform and die It presents a guidebook a tour of facts history commentary opinions and pointers to interesting ideas and new possibilities to consider and explore Studies in Musical Acoustics and Psychoacoustics Albrecht

Schneider,2016-12-26 This book comprises twelve articles which cover a range of topics from musical instrument acoustics to issues in psychoacoustics and sound perception as well as neuromusicology In addition to experimental methods and data acquisition modeling such as FEM or wave field synthesis and numerical simulation plays a central role in studies addressing sound production in musical instruments as well as interaction of radiated sound with the environment Some of the studies have a focus on psychoacoustic aspects in regard to virtual pitch and timbre as well as apparent source width for techniques such as stereo or ambisonics in music production Since musical acoustics imply subjects playing instruments or singing in order to produce sound according to musical structures this area is also covered including a study that presents an artificial intelligent agent capable to interact with a real analog player in musical genres such as traditional and free jazz *Catalog of Copyright Entries.
