Schools for Thought John T. Bruer, 1994 *Schools for Thought* provides a straightforward general introduction to cognitive research and illustrates its importance for educational change If we want to improve educational opportunities and outcomes for all children we must start applying what we know about mental functioning how children think learn and remember in our schools We must apply cognitive science in the classroom *Schools for Thought* provides a straightforward general introduction to cognitive research and illustrates its importance for educational change Using classroom examples Bruer shows how applying cognitive research can dramatically improve students transitions from lower level rote skills to advanced proficiency in reading writing mathematics and science Cognitive research he points out is also beginning to suggest how we might better motivate students design more effective tools for assessing them and improve the training of teachers He concludes with a chapter on how effective school reform demands that we expand our understanding of teaching and learning and that we think about education in new ways Debates and discussions about the reform of American education suffer from a lack of appreciation of the complexity of learning and from a lack of understanding about the knowledge base that is available for the improvement of educational practice Politicians business leaders and even many school superintendents principals and teachers think that educational problems can be solved by changing school management structures or by creating a market in educational services Bruer argues that improvement depends instead on changing student teacher interactions It is these changes guided by cognitive research that will create more effective classroom environments A Bradford Book

Everyday Thinking Stanley Woll, 2001-07-01 Appropriate as a textbook for courses in cognitive psychology or social cognition Everyday Thinking reviews the rapidly growing literature on cognition in naturalistic settings It differs from other textbooks in that where possible it focuses on thinking in real world settings rather than in controlled laboratory settings and provides detailed treatments of each of the following topics how we form impressions of and represent persons in memory how we recognize and represent faces how we reason in our day to day lives and go about solving everyday problems how we make judgments and decisions how we encode memories of events both for future action and for our own life histories and what are some of the implications of everyday knowledge and cognition for education and instruction This book presents the theoretical positions and research evidence on each of these topics and examines the generally unexplored connections among them As a result this book presents the study of cognition in a more

relevant form and in a context that readers can more readily apply to their own lives
