Recombinant Urbanism David Grahame Shane, 2005-06-17 This book provides a simple but comprehensive framework for the emerging academic discipline of urban design from its origins in Europe and America to contemporary issues of imagery finance and marketing in an age of globalisation There is currently no contemporary textbook for urban design that includes a general history and theory of the subject Internationally urban design is more and more becoming a core subject taught in architecture schools The AIA US and the RIBA UK both require undergraduates and graduates to study the urban dimension of architectural design On a wider scale in Europe the EU is developing a common architectural curriculum which includes an urban component for under graduates The situation is similar in schools across Asia and Australia Aimed at both students and teachers this book provides a simple and accessible framework from the origins of urban design and the main techniques developed to deal with the design of fragments of cities to participatory planning processes codes imagery finance and marketing Finally it proposes an innovative vision of contemporary practice based on the work of leading actors and projects in the field This book is set to become the key textbook at undergraduate and graduate levels It is written in an accessible and direct tone and highly illustrated with many colour and black and white diagrams It includes a general history and theory of urban design and provides an up to date account of contemporary urban conditions Praise for Recombinant Urbanism Documents a major intellectual advance eagerly awaited by academics and practitioners all around the world should become a standard text for schools of architecture and urbanism Leon Van Schaik Innovation Professor of Architecture RMIT Australia both unique and instrumentally positive The book is the result of many years of research and writing and is a small masterpiece in urban studies It has already proved its worth in the teaching of urban studies at Columbia the AA the Bartlett School and Cooper Union to mention only a few of the universities where Dr Shane has had a powerful influence It is indeed one of the very best manuscripts I have read in the field in the last few years Anthony Vidler Professor and Dean Irwin S Chanin School of Architecture Cooper Union New York USA I can say without hesitation that I fully endorse Grahame s work the issues it covers are highly topical and such a book would indeed be widely read by architecture students urban designers and planners Colin Fournier Professor of Architecture again Shane has made important urban theories and thinking more widely available to an international student audience The legacy the book will have will be in convincing people that the design of cities matters not in the overbearing and over controlling sense of new urbanism but in reinforcing the multiple possibilities of contemporary life Brian McGrath Adjunct Associate Professor of Architecture Columbia University USA Metropolitan Landscapes Antonella Contin, 2021-08-24 This edited volume covers many aspects of the Metropolitan Landscapes Solutions are needed to meet the demand of the citizens of a renewed metropolitan region landscape It opens up discussions about possible toolkits for strategic actions based on understanding the territory from geographical urban architectural economic environmental and public policy perspectives This book intends

to promote the Metropolitan dwelling quality ensuring human well being proposing a discussion on the resilient articulation of the interface space among the city s infrastructure agriculture and nature This book results from the Symposium Metropolitan Landscapes that MSLab of the Politecnico di Milano and ETSA Sevilla organized at the IALE 2019 Conference Milan July 2019 to manage radical territory transformation with a strategic vision The widespread growth of urban areas indicates the importance of building resilient sustainable cities capable of minimizing climate change impact production The Symposium aimed to discuss the Urban Metabolism approach considering the combination of Landscapes set in a single Metropolitan Ecosystem Accordingly new design strategies of transformation replacement or maintenance can compose Urban Rural Linkage patterns and a decalage of different landscape contexts Ecological interest in environmental sustainability compatibility and resilience is not tied exclusively to the balance between production and energy consumption Thus it is the integration over time and at several scales of the urban and rural landscapes and their inhabitants that nourish the Metropolitan Bioregion Moreover the Metropolitan Landscape Book s research hypothesis is the need for a Glossary strengthening the basis of understanding Metropolitan Landscape s complexity This book s topic is particularly relevant to Landscape Urbanism Architecture Urban disciplines Scholars Students and Practitioners who want to be connected in a significant way with Metropolitan Discipline s research field

Mega-event Cities: Urban Legacies of Global Sports Events Valerie Viehoff, Gavin Poynter, 2016-03-02 Mega events represent an important moment in the life of a city, providing a useful lens through which we may analyse their cultural, social, political, and economic development. In the wake of the International Olympic Committee's IOC's concerns about gigantism and wider public concerns about rising costs, it was imperative in the 21st century to demonstrate the long-term benefits that arose for the city and nations from hosting premier sporting events. London 2012 was the first to integrate the concept of legacy from the moment a bid to host the Olympic and Paralympic Games was being considered. London proposed an ambitious programme of urban renewal for East London. Subsequent host city bids have adopted the legacy narrative, and as this book demonstrates, aligned this to major schemes of urban development and renewal. Bringing together scholars, practitioners, and policy makers, this book focuses upon the legacies sought by cities that host major sports events. It analyses how governments, the IOC, and others define and measure legacy. It also focuses upon the challenges and opportunities facing future host cities of mega events, looking at their aspirations and the intended impact upon their domestic and international development. It questions what the global shift in geographical location of mega events means for sports development and the business of sport, what the attractions are for cities seeking to harness the hosting of a mega event, and whether there may be longer-term consequences for the bidding and hosting of major sporting events in the wake of the widespread social unrest that accompanied the preparations in Brazil for hosting the FIFA World Cup 2014 and the summer Olympics 2016, and in Turkey where there was significant opposition to bid for the 2020 summer Olympiad.

Basics Landscape Architecture 01: Urban Design Tim Waterman, Ed Wall, 2017-11-02 Basics Landscape Architecture 01 Urban Design seeks to define and describe the role played by landscape architecture in urban design, an interdisciplinary practice that is concerned with defining the form of human settlements. It provides a brief history and definition of urban design and the roles of the various professions involved. Urban Design looks at the elements of urban form and the importance of contextual details from the scale of the city and its region to the importance of materials. The text uses case studies to explore the philosophies and methodologies of urban design and to explain the importance of urban design to landscape architecture and, in turn, the importance of landscape architecture to urban design.

Big House Little City Benedict Zucchi, 2023-09-08 Shortlisted for the Architectural Book Awards 2024. Combining architectural and urban thinking in an unusual and engaging way, this book presents an integrated approach to architectural theory and design. Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a

series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered. Explicit references to Alberti's house-city phrase have been made by figures as diverse as the architects Louis Kahn, Aldo Van Eyck, Denys Lasdun and Niels Torp, and novelist Italo Calvino. But as the book shows, thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects, including Le Corbusier, Frank Lloyd Wright, Alvar Aalto, Eliel Saarinen, Bernard Rudofsky, Hans Scharoun, Leon Krier, Fumihiko Maki, Charles Correa, and Team 10. In doing so, the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity, the Middle Ages, Renaissance, and 20th century. The book explores buildings from across the globe, including lesser-known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy, as well as more recent projects by Niels Torp, Behnisch Architekten, Sou Fujimoto, Peter Barber, and WOHA. It concludes with practical case studies of residential, health, education, and workplace projects from different countries, fulsomely illustrated with many drawings and photographs. These show how architectural design, viewed through an urban lens, provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context. And crucially, these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process. The book offers a compelling approach to the design of projects at all scales within an ecological perspective, the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat, both natural and man-made.

Chasing the City Joshua M Nason, Jeffrey S Nesbit, 2018-10-08. Historically, many architects, planners, and urban designers solicit idealistic depictions of a controllable urban environment, made from highly regulated geometrical organizations and systematically defined processes. Rather than working as urban designers who set out to control and implant external processes, we shift our approach to that of urban detectives who set out to chase the city. Charged with approaching the city more responsively, we investigate what we do not know, allowing the city to direct our work. As urban detectives, we have the ability to interrogate and respond to the elaborate patterns emerging from self-generated, internalized urban interactions. *Chasing the City* asks what are the current design trends shaping how we first understand the cities of today, to then produce informed decisions on the continuously undefined, evolving city of tomorrow. Intentionally, the work here does not adhere to rudimentary notions of supposed singularities or rely upon past generations of idealistic utopian models. Rather, *Chasing the City* delineates current models of urban investigation that seek to respond to the nature of cities and develop heretofore urban strategies as concurrently negotiated future urbanism. This edited volume provides a collection of innovative design research projects based on shared notions of *Chasing the City* through three bodies of strategic frameworks: 1. Mapping, 2. Resource, and 3. Typology. This structure ultimately allows readers, as fellow urban detectives, access to exploratory tools and methods of detection that accumulate from our environs, both practical and projective, in our chase of the city.

Hollander, Ann Sussman, 2020-10-15 Embracing a biological and evolutionary perspective to explain the human experience of place Urban Experience and Design explores how cognitive science and biometric tools provide an evidence based foundation for architecture and planning Aiming to promote the creation of a healthier and happier public realm this book describes how unconscious responses to stimuli outside our conscious awareness direct our experience of the built environment and govern human behavior in our surroundings This collection contains 15 chapters including contributions from researchers in the US the UK the Netherlands France and Iran Addressing topics such as the impact of eye tracking analysis and seeing beauty and empathy within buildings Urban Experience and Design encourages us to reframe our understanding of design including the narrative of how modern architecture and planning came to be in the first place This volume invites students academics and scholars to see how cognitive science and biometric findings give us remarkable 21st century metrics for evaluating and improving designs even before they are built *Heterotopia and the City* Michiel Dehaene, Lieven De Cauter, 2008-05-15 Heterotopia literally meaning other place is a rich concept in urban design that describes a space that is on the margins of ordered or civil society and one that possesses multiple fragmented or even incompatible meanings The term has had an impact on architectural and urban theory since it was coined by Foucault in the late 1960s but it has remained a source of confusion and debate since Heterotopia and the City seeks to clarify this concept and investigates the heterotopias which exist throughout our contemporary world in museums theme parks malls holiday resorts gated communities wellness hotels and festival markets With theoretical contributions on the concept of heterotopia including a new translation of Foucault's influential 1967 text *Of Other Space* and essays by well known scholars the book comprises a series of critical case studies from Beaubourg to Bilbao which probe a range of post urban transformations and which redirect the debate on the privatization of public space Wastelands and terrains vagues are studied in detail in a section on urban activism and transgression and the reader gets a glimpse of the extremes of our dualized postcivil condition through case studies on Jakarta Dubai and Kinshasa Heterotopia and the City provides a collective effort to reposition heterotopia as a crucial concept for contemporary urban theory The book will be of interest to all those wishing to understand the city in the emerging postcivil society and post historical era Planners architects cultural

theorists urbanists and academics will find this a valuable contribution to current critical argument **Shopping Malls and Public Space in Modern China** Nicholas Jewell, 2016-03-03 China's rise as an economic superpower has been inescapable. Statistical hyperbole has been accompanied by a plethora of highly publicized architectural forms that brand the regeneration of its increasingly globalized urban centres. Despite the sizeable body of literature that has accompanied China's modernization, the essence and trajectory of its contemporary cityscape remains difficult to grasp. This volume addresses a less explored aspect of China's urban rejuvenation: the prominence of the shopping mall as a keystone of its public spaces. Here, the presence of the built form most representative of Western capitalism's excess is one that makes explicit the tensions between China's Communist state and its ascent within the free market. This book examines how these interrelationships are manifested in the culturally hybrid built form of the shopping mall and its role in contesting the public space of the modern Chinese city. By viewing these interrelationships as collisions of global and local narratives, a more nuanced understanding of the shopping mall typology is explored. Much architectural criticism has failed to address the levels of meaning implicit within the shopping mall; yet it is a building type whose public popularity has guaranteed its endurance. Consequently, if architecture is to remain a relevant social art, a more holistic understanding of this phenomenon will be indispensable to the process of adapting to globalizing forces. This examination of Chinese shopping malls offers a timely and relevant case study of what is happening in all our cities today. The Routledge Handbook of Planning Theory Michael Gunder, Ali Madanipour, Vanessa Watson, 2017-08-23 The Routledge Handbook of Planning Theory presents key contemporary themes in planning theory through the views of some of the most innovative thinkers in planning. They introduce and explore their own specialized areas of planning theory to conceptualize their contemporary positions and to speculate how these positions are likely to evolve and change as new challenges emerge. In a changing and often unpredictable globalized world, planning theory is core to understanding how planning and its practices both function and evolve. As illustrated in this book, planning and its many roles have changed profoundly over the recent decades, so have the theories both critical and explanatory about its practices, values, and knowledges. In the context of these changes and to contribute to the development of planning research, this handbook identifies and introduces the cutting edge and the new emerging trajectories of contemporary planning theory. The aim is to provide the reader with key insights into not just contemporary planning thought but potential future directions of both planning theory and planning as a whole. This book is written for an international readership and includes planning theories that address or have emerged from both the global North and parts of the world beyond. *The Emerging Public Realm of the Greater Bay Area* Miodrag Mitrašinić, Timothy Jachna, 2021-07-29 Through illustrated case studies and conceptual reframings, this volume showcases ongoing transformations in public space and its relationship to the public realm more broadly in the world's most populous urban megaregion, the Greater Bay Area of southeastern China, projected to reach eighty million inhabitants by the year 2025. This book assembles diverse approaches to

interrogating the forms of public space and the public realm that are emerging in the context of this region's rapid urban development in the last forty years bringing together authors from urbanism architecture planning sociology anthropology and politics to examine innovative ways of framing and conceptualizing public space in of the Greater Bay Area The blend of authors first hand practical experiences has created a unique cross disciplinary book that employs public space to frame issues of planning political control social inclusion participation learning education and appropriation in the production of everyday urbanism In the context of the Greater Bay Area such spaces and practices also present opportunities for reconfiguring design driven urban practice beyond traditional interventions manifested by the design of physical objects and public amenities to the design of new social protocols processes infrastructures and capabilities This is a captivating new dimension of urbanism and critical urban practice and will be of interest to academics students and practitioners interested in urbanization in China

Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian

McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience

Urban Sustainability Through Environmental Design Kevin Thwaites, Sergio Porta, Ombretta Romice, Mark Greaves, 2007-12-06 What can architects landscape architects and urban designers do to make urban open spaces streets and squares more responsive lively and safe Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments The book calls into question the capability of quick fix development solutions to provide the establishment of fixed communities and suggests a more time conscious and evolutionary approach This is the first significant book to draw together a pan European view on sustainable urban design with a specific focus on social sustainability It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions

themselves With its practical approach and wide ranging discussion this book will appeal to all those involved in producing communities and spaces for sustainable living from students to academics through to decision makers and professional leaders

Acculturating the Shopping Centre Janina Gosseye, Tom Avermaete, 2018-10-16 *Acculturating the Shopping Centre* examines whether the shopping centre should be qualified as a global architectural type that effortlessly moves across national and cultural borders in the slipstream of neo liberal globalization or should instead be understood as a geographically and temporally bound expression of negotiations between mall developers representatives of a global logic of capitalist accumulation on the one hand and local actors architects governments citizens on the other It explores how the shopping centre adapts to new cultural contexts and questions whether this commercial type has the capacity to disrupt or even amend the conditions that it encounters Including more than 50 illustrations this book considers the evolving architecture of shopping centres It would be beneficial to academics and students across a number of areas such as architecture urban design cultural geography and sociology

Touching Architecture Anthony Brand, 2022-12-30 This book is about perception emotion and affect in architecture how and why we feel the way that we do and the ways in which our surroundings and bodies contribute to this Our experience of architecture is an embodied one with all our senses acting in concert as we move through time and space The book picks up where much of the critique of architectural aestheticism at the end of the twentieth century left off illustrating the limitations and potential consequences of attending to architecture as the visually biased practice which has steadily become the status quo within both industry and education It draws upon interdisciplinary research to elucidate the reasons why this is counter productive to the creation of meaningful places and to articulate the embodied richness of our touching encounters A felt phenomenology is introduced as a more than visual alternative capable of sustaining our physical emotional and psychological well being By recognising the reciprocal and participatory relationship that exists between atmospheric affect and our phenomenological bodies we begin to appreciate the manifold ways in which we touch and are touched by our built environment As such *Touching Architecture* will appeal to those with an interest in architectural history and theory as well as those interested in the topic of atmospheres affect and embodied perception
