Methodology for Buildings Peter Fajfar, 1996 Unified Theory of Concrete Structures Thomas T. C. Hsu, Yi-Lung Mo, 2010-03-16 Unified Theory of Concrete Structures develops an integrated theory that encompasses the various stress states experienced by both RC PC structures under the various loading conditions of bending axial load shear and torsion Upon synthesis the new rational theories replace the many empirical formulas currently in use for shear torsion and membrane stress The unified theory is divided into six model components a the struts and ties model b the equilibrium plasticity truss model c the Bernoulli compatibility truss model d the Mohr compatibility truss model e the softened truss model and f the softened membrane model Hsu presents the six models as rational tools for the solution of the four basic types of stress focusing on the significance of their intrinsic consistencies and their inter relationships Because of its inherent rationality this unified theory of reinforced concrete can serve as the basis for the formulation of a universal and international design code Includes an appendix and accompanying website hosting the authors finite element program SCS along with instructions and examples Offers comprehensive coverage of content ranging from fundamentals of flexure shear and torsion all the way to non linear finite element analysis and design of wall type structures under earthquake loading Authored by world leading experts on torsion and shear Advances and Challenges in Structural Engineering Hugo Rodrigues, Amr Elnashai, 2018-10-27 This edited volume on challenges in structural and bridge engineering brings together contributions to this important area of engineering research The volume presents findings and case studies on fundamental and applied aspects of structural engineering applied to buildings bridges and infrastructures in general and heritage patrimony The scope of the volume focuses on the application of advanced experimental and numerical techniques and new technologies to the built environment The volume is based on the best contributions to the 2nd GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures Egypt 2018 The official international congress of the Soil Structure Interaction Group in Egypt SSIGE *CIGOS 2021, Emerging Technologies and Applications for Green Infrastructure* Cuong Ha-Minh, Anh Minh Tang, Tinh Quoc Bui, Xuan Hong Vu, Dat Vu Khoa Huynh, 2021-10-28 This book highlights the key role of green infrastructure GI in providing natural and ecosystem solutions helping alleviate many of the environmental social and economic problems caused by rapid urbanization The book gathers the emerging technologies and applications in various disciplines involving geotechnics civil engineering and structures which are presented in numerous high quality papers by worldwide researchers practitioners policymakers and entrepreneurs at the 6th CIGOS event 2021 Moreover by sharing knowledge and experiences around emerging GI technologies and policy issues the book aims at encouraging adoption of GI technologies as well as building capacity for implementing GI practices at all scales This book is useful for researchers and professionals in designing building and managing sustainable buildings and infrastructure
