Kenneth J. Luterbach, 2022-05-12. **Creating Stellar Lessons with Digital Tools** prepares teachers in training and in service teachers to use technologies for design and development activities with middle and high school students. While software, open resources, handheld devices and other tools hold great potential to enhance learning experiences, teachers themselves must model technology use in ways that inspire students to become producers and leaders rather than consumers and followers. Featuring concrete applications in social studies, English, mathematics and science scenarios, this book provides pre-service and in-service teachers with seven paths to creatively integrate and innovate with computational thinking, datasets, maker spaces, visual design, media editing and other approaches. Harold D. Peterson, 1969. **Emergent Web Intelligence: Advanced Semantic Technologies**. Youakim Badr, Richard Chbeir, Ajith Abraham, Aboul-Ella Hassanien, 2010-06-17. The success of the World Wide Web depends on the ability of users to store, process and retrieve digital information regardless of distance, boundaries, languages and domains of knowledge. The universality and exibility of the World Wide Web have also enabled the rapid growth of a variety of new services and applications based on human-machine interaction. The semantics of exchanged information and services should be useful not only for human-to-human communications but also in that machines would be able to understand and automatically process web content. Semantics give well-defined meaning to web content and enable computers and people to work in cooperation. Today the crucial challenge becomes the development of languages to express information in a machine-processable format. Now more than ever, new advanced techniques and intelligent approaches are required to transform the Web into a universal reasoning and computing machine. Web intelligence attempts to deal with this challenge by exploiting information technologies and ticial intelligence approaches to design the next generation of web-empowered systems and services. *Books in Print*, 1991.
