## **Lunar Meteoroid Impacts And How To Observe Them:**

Lunar Meteoroid Impacts and How to Observe Them Brian Cudnik,2010-03-10 The genesis of modern searches for observable meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938 In it he argued that the absence of observed flashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefied lunar atmosphere The paper suggested the possibility of systematic searches for such possible lunar meteors With these concepts in mind I was surprised to note a transient moving bright speck on the Moon on July 10 1941 It appeared to behave very much as a lunar meteor would except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity Thus the idea of systematic searches for both possible lunar meteors and meteoritic impact flashes was born It was appreciated that much time might need to be expended to achieve any positive results Systematic searches were carried out by others and myself chiefly in the years 1945 1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers or ALPO

**Lunar Meteoroid Impacts and How to Observe Them** Brian Cudnik,2009-12-04 The face of the Moon we see today has been substantially etched by the effects of meteor impacts Craters on the Moon are the result of ancient impacts with large meteorites or small asteroid like bodies which produced both primary craters where the meteorites hit and secondary craters where material hurled high above the surface crashed back down Even some of the vast lunar seas actually basalt plains from ancient volcanic eruptions may have been the result of impacts that triggered lava outflows The era of major impacts on the Moon may have passed but lunar meteorites may well be the cause of what are known as Lunar Transient Phenomena LTP or sometimes TLP flashes and puffs of gas or vaporized rock or dust that are observed on the Moon's surface This book looks at the way the Moon has been shaped by meteorites proposes lunar meteorites as the most likely cause of most LTPs and describes in practical detail how amateur astronomers can observe impacts on the Moon past and current
