Innovations in Engineering Education , 2005 *Biochemical Technology, Part A* L. Bulow, 1997-05-06 In December 1992 the Department of Pure and Applied Biochemistry at the Chemical Center in Lund Sweden organized an international meeting the Mosbach Symposium on Biochemical Technology to celebrate the 60th birthday of professor Klaus Mosbach one of the founders of modern biotechnology The history of Pure and Applied Biochemistry had its start in 1970 a couple of years after the foundation of the Chemical Center Klaus Mosbach has been its professor and head of Pure and Applied Biochemistry since its start During the 1980 s he also maintained a professorship at the ETH in Zurich Switzerland Professor Mosbach is internationally well known and he has world leading position within the field of immobilization of bioactive substances and cells as well as affinity chromatography In 1990 Professor Mosbach was awarded the gold medal by the Royal Swedish Academy of Engineering Sciences for his contributions to biotechnology especially on the immobilization of bioactive substances The research activities of the Department of Pure and Applied Biochemistry cover a broad area such as affinity and separation techniques bioprocess control biosensors development of new carriers and new immobilization procedures for

small molecules as well as proteins and cells including animal and plant cells gene technology processes based on immobilized biocatalysts and construction of organic polymers with enzyme like properties The hallmark of the department is its diversified research that generates considerable synergistic effects that are manifested by many new techniques and concepts emanating from the laboratory during the last 20 years Several of these are marketed by various biotechnology companies At this meeting we therefore arranged for some of the world's leading experts in biochemistry and biotechnology to give lectures The topics covered comprise enzyme technology immobilization of enzymes and cells abzymes metabolic engineering biosensors and molecular recognition The official gift from the symposium committee and the participants is this Festschrift which covers several important fields of research within the area of biochemical technology We have made a very unusual approach and have let the hero of the occasion present the history of his research      **Comprehensive**

Amos, 2017-05-11 This book describes the structures and functions of active protein filaments found in bacteria and archaea and now known to perform crucial roles in cell division and intra cellular motility as well as being essential for controlling cell shape and growth These roles are possible because the cytoskeletal and cytomotive filaments provide long range order from small subunits Studies of these filaments are therefore of central importance to understanding prokaryotic cell biology The wide variation in subunit and polymer structure and its relationship with the range of functions also provide important insights into cell evolution including the emergence of eukaryotic cells Individual chapters written by leading researchers review the great advances made in the past 20-25 years and still ongoing to discover the architectures

dynamics and roles of filaments found in relevant model organisms Others describe one of the families of dynamic filaments found in many species The most common types of filament are deeply related to eukaryotic cytoskeletal proteins notably actin and tubulin that polymerise and depolymerise under the control of nucleotide hydrolysis Related systems are found to perform a variety of roles depending on the organisms Surprisingly prokaryotes all lack the molecular motors associated with eukaryotic F actin and microtubules Archaea but not bacteria also have active filaments related to the eukaryotic ESCRT system Non dynamic fibres including intermediate filament like structures are known to occur in some bacteria Details of known filament structures are discussed and related to what has been established about their molecular mechanisms including current controversies The final chapter covers the use of some of these dynamic filaments in Systems Biology research The level of information in all chapters is suitable both for active researchers and for advanced students in courses involving bacterial or archaeal physiology molecular microbiology structural cell biology molecular motility or evolution Chapter 3 of this book is open access under a CC BY 4 0 license
