Human-Computer Interaction Steve Howard, Judy Hammond, Gitte Lindgaard, 2013-06-05 The theme of the 1997 INTERACT conference Discovering New Worlds of HCI signals major changes that are taking place with the expansion of new technologies into fresh areas of work and leisure throughout the world and new pervasive powerful systems based on multimedia and the internet HCI has a vital role to play in these new worlds to ensure that people using the new technologies are empowered rather than subjugated to the technology that they increasingly have to use In addition outcomes from HCI research studies over the past 20 years are now finding their way into many organisations and helping to improve and

enhance work practices These factors have strongly influenced the INTERACT 97 Committee when creating the conference programme with the result that besides the more traditional HCI research and education focus found in previous INTERACT conferences one strand of the 1997 conference has been devoted to industry and another to multimedia The growth in the IFIP TC13 committee itself reflects the expansion of HCI into new worlds Membership of IFIP TC13 has risen to now include representatives of 24 IFIP member country societies from many parts of the world In 1997 IFIP TC13 breaks new ground by holding its sixth INTERACT conference in the Asia Pacific region This is a significant departure from previous INTERACT conferences that were all held in Europe and is especially important for the Asia Pacific region as HCI expands beyond its traditional base

Reading has arguably the longest and richest history of any domain for scientifically considering the impact of technology on the user From the 1920s to the 1950s Miles Tinker 1963 and other researchers ran hundreds of user tests that examined the effects of different fonts and text layout variables such as the amount of vertical space between each line of text called leading Their research focused on user performance and reading speed was the favoured measure They charted the effect of the manipulated variables on reading speed looking for the point at which their participants could read the fastest Their assumption was that faster reading speeds created a more optimal experience Printers and publishers eagerly consumed this research In recent years some of these variables have been reexamined as the technology and capabilities evolve with the advent of computers and computer screens Dillon 1992 examined how to design textual information for an electronic environment Boyarski et al 1998 examined the effect of fonts that were designed for computer screens Dyson Kipping 1998 examined the effect of line length on computer screens Larson et al 2000 examined the effect of 3 D rotation on reading Gugerty et al 2004 demonstrated a reading performance advantage with the Microsoft ClearType display technology
