Bader, 2006-10-13 With this work Martin Bader examines how companies can take an intellectual property lead during the early stages of inter firm research and development R&D collaborations Previously little research has investigated the management of patents in the early phases of the innovation process Furthermore there is a dearth of research on patent management in the service industry sector in which intellectual property management remains a new concept Bader offers a detailed examination of the process by considering the service industry sector and analyzes a current relevant complex problem prominent in management research The research at hand

stems from two phenomena both of which are based on knowledge gains achieved in the area of intellectual property management in recent years First the number of announced patent applications has increased by 20-30% per year even without considering multiple patent registrations in several countries Second the number of collaborative agreements in the innovation process has simultaneously increased However many R D collaborations eventually turn out to be successful so the question arises To whom does the intellectual property generated by a collaboration belong This ownership often is decided and specified during the early phases of the R D process
