Fluid Mechanics, Hydraulics, Hydrology and Water Resources for Civil Engineers Amithirigala Widhanelage Jayawardena, 2021-01-27 One of the core areas of study in civil engineering concerns water that encompasses fluid mechanics hydraulics and hydrology Fluid mechanics provide the mathematical and scientific basis for hydraulics and hydrology that also have added empirical and practical contents The knowledge contained in these three subjects is necessary for the optimal and equitable management of this precious resource that is not always available when and where it is needed sometimes with conflicting demands The objective of *Fluid Mechanics Hydraulics Hydrology and Water Resources for Civil Engineers* is to assimilate these core study areas into a single source of knowledge The contents highlight the theory and applications supplemented with worked examples and also include comprehensive references for follow up studies The primary readership is civil engineering students who would normally go through these

core subject areas sequentially spread over the duration of their studies It is also a reference for practicing civil engineers in the water sector to refresh and update their skills
