Peterson, Timothy S. Bredow, 2009 This groundbreaking text is the most complete and detailed book devoted to middle range theories and their applications in clinical nursing research The book thoroughly explains the process of selecting an appropriate theory for a particular nursing research study and sets forth criteria for critiquing theories Each chapter includes examples of research using middle range theories definitions of key terms analysis exercises reference lists and relevant Websites Instruments are presented in appendices New features of this edition include analysis questions for all theories new chapters on learning theory and physiologic middle range theories Part introductions to frame the selection process for each middle range theory chosen and a glossary of terms     Nursing Theories Hesook Suzie Kim, Ingrid Kollak, 2006 This book is written for advanced nursing students The second edition of Nursing theories explores the conceptual and philosophical foundations of selected major nursing theories The book is not a survey or evaluation of nursing theories but is designed to assist students in understanding the core philosophical concepts behind nursing theories and how they can be applied to current nursing practice New to this second edition Essays warranted by developments in the science and research of nursing Three chapters addressing pragmatism evidence based nursing biography Newly authored chapters on systems and transcultural thoughts reflecting current thinking and new directions Completely rewritten chapters on interaction and self care to incorporate current debates Provided by the publisher     Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice Because of these assumptions most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories Theorists themselves did not uncover or adequately discuss ways by which they developed their theories therefore the tendency was to describe processes that were based on theories developed in other disciplines mainly the physical and social sciences And an implicit assumption was made that there should be a single strategy for theory

development some claiming to begin the process from practice and others believing it should be driven by research Provided by publisher
