**Innovative and Agile Contracting for Digital Transformation and Industry 4.0** Shalan, Mohammad Ali, Algarni, Mohammed Ayedh, 2020-12-18 Digital transformation is reshaping the business arena as new successful digital business models are increasing agility and presenting better ways to handle business than the traditional alternatives Industry 4 0 affects everything in our daily lives and is blurring the line between the physical the biological and the digital This created an

environment where technology and humans are so closely integrated that it is impacting every activity within the organizations. Specifically, contracting processes and procedures are challenged to align with the new business dynamics as traditional contracts are no longer fitting today's agile and continuously changing environments. Businesses are required to facilitate faster, more secure, soft and real time transactions while protecting stakeholders' rights and obligations. This includes agile contracts which are dynamically handling scope changes, smart contracts that can automate rule based functions, friction less contracts that can facilitate different activities and opportunity contracts that look toward the future. Innovative and Agile Contracting for Digital Transformation and Industry 4.0 analyzes the consequences, benefits and possible scenarios of contract transformation under the pressure of new technologies and business dynamics in modern times. The chapters cover the problems, issues, complications, strategies, governance and risks related to the development and enforcement of digital transformation contracting practices. While highlighting topics in the area of digital transformation and contracting such as artificial intelligence, digital business, emerging technologies and blockchain, this book is ideally intended for business engineering and technology practitioners and policy makers along with practitioners, stakeholders, researchers, academicians and students interested in understanding the scope, complexity and importance of innovative contracts and agile contracting.

**Extreme Programming and Agile Processes in Software Engineering** Jutta Eckstein, Hubert Baumeister, 2004-06-01. Software development is being revolutionized. The heavy weight processes of the 1980s and 1990s are being replaced by light weight so called agile processes. Agile processes move the focus of software development back to what really matters: running software. This is only made possible by accepting that software development is a creative job done by with and for individual human beings. For this reason agile software development encourages interaction, communication and fun. This was the focus of the Fifth International Conference on Extreme Programming and Agile Processes in Software Engineering which took place between June 6 and June 10, 2004 at the conference center in Garmisch-Partenkirchen at the foot of the Bavarian Alps near Munich, Germany. In this way the conference provided a unique forum for industry and academic professionals to discuss their needs and ideas for incorporating Extreme Programming and Agile Methodologies into their professional life under consideration of the human factor. We celebrated this year's conference by reflecting on what we had achieved in the last half decade and we also focused on the challenges we will face in the near future.
