Anthony Blair, Charles A. Willard, A. Francisca Snoeck Henkemans, 2012-12-06 This volume of the Argumentation Library contains a collection of twenty six theoretical contributions to the study of argumentation Together they provide an over view of recent developments in the theory of argumentation which does justice to the theoretical variety in the field In Anyone Who Has a View the subject of argumentation is approached from different angles Both the formal and informal logical approaches and the rhetorical and

communicative approaches are represented in various ways. We are convinced that the collection of essays as a whole will be of interest not only to those engaged directly in the study of argumentation but also to scholars from a variety of disciplines who are interested in the recent developments in this field. The book opens with an essay by the informal logician Robert C. Pinto. For all the differences between them, James B. Freeman, Harvey Siegel, Ralph H. Johnson, Hans V. Hansen, and J. Anthony Blair are also prominent members of that movement. Some informal logicians either eschew or simply do not use formal methods in their approach to argumentation while others such as David Hitchcock use both formal and informal methods. Erik C. W. Krabbe is a logician who proudly defends a formal dialectical approach to argumentation. Daniel H. Cohen, Frans H. van Eemeren, Peter Houtlosser, Fred J. Kauffeld, C. Scott Jacobs, Christian Kock, Christian Plantin, Sorin Stati, Chris Reed, Douglas N.

Argument Dialectics: The Place of Reasons in Logic Hubert Marraud, 2025-06-12. This book is a systematic exposition of Argument Dialectics (AD). Despite its name, argument dialectics is a logical approach to argumentation theory. AD stands out among theories of argument because of three unusual features: it is reasons-based, holistic, and particularistic. This implies that AD conceives of logic as a theory of the dialectical construction of reasons, not as a theory of inferences. Consequently, contrary to other logical approaches, AD focuses on the study of interargumentative relations, especially those of opposition and weighing. The book makes an extensive use of the theory of reasons, a branch of metaethics that has been a very valuable quarry of intuitions and concepts for the elaboration of a reason-based theory of argument. The oppositions, generalism, particularism, and atomism, holism proposed by Jonathan Dancy, which play a central role in the book and in the development of AD, have been adapted from the theory of reasons, and the same can be said of the distinction between different statuses of reasons that AD associates with different kinds of counterarguments. Conceiving of the theory of argument in terms of reasons has the effect of situating the paradigm of argumentation in practical argumentation, reasoning about what to do rather than in theoretical argumentation about what to believe as inference-based theories do. Hence, this book is of interest to argumentation theorists, communication theorists, epistemologists, linguists, moral philosophers, and philosophers of law.

Fallacies in Medicine and Health Louise Cummings, 2020-02-29 This textbook examines the ways in which arguments may be used and abused in medicine and health The central claim is that a group of arguments known as the informal fallacies

including slippery slope arguments fear appeal and the argument from ignorance undertake considerable work in medical and health contexts and that they can in fact be rationally warranted ways of understanding complex topics contrary to the views of many earlier philosophers and logicians Modern medicine and healthcare require lay people to engage with increasingly complex decisions in areas such as immunization lifestyle and dietary choices and health screening Many of the so called fallacies of reasoning can also be viewed as cognitive heuristics or short cuts which help individuals make decisions in these contexts Using features such as learning objectives case studies and end of unit questions this textbook examines topical issues and debates in all areas of medicine and health including antibiotic use and resistance genetic engineering euthanasia addiction to prescription opioids and the legalization of cannabis It will be useful to students of critical thinking reasoning logic argumentation rhetoric communication health humanities philosophy and linguistics **The SAGE**
