Contemporary Mathematics Ams:

The Orbit Method in Geometry and Physics Christian Duval, Laurent Guieu, Valentin Ovsienko, 2012-12-06 The volume is dedicated to AA Kirillov and emerged from an international conference which was held in Luminy Marseille in December 2000 on the occasion of Alexandre Alexandrovich's 2th birthday The conference was devoted to the orbit method in representation theory an important subject that influenced the development of mathematics in the second half of the XXth century Among the famous names related to this branch of mathematics the name of AA Kirillov certainly holds a distinguished place as the inventor and founder of the orbit method The research articles in this volume are an outgrowth of the Kirillov Fest and they illustrate the most recent achievements in the orbit method and other areas closely related to the scientific interests of AA Kirillov The orbit method has come to mean a method for obtaining the representations of Lie groups It was successfully applied by Kirillov to obtain the unitary representation theory of nilpotent Lie groups and at the end of this famous 1962 paper it was suggested that the method may be applicable to other Lie groups as well Over the years the orbit method has helped to link harmonic analysis the theory of unitary representations of Lie groups with differential geometry the symplectic geometry of homogeneous spaces This theory reinvigorated many classical domains of mathematics such as representation theory integrable systems complex algebraic geometry It is now a useful and powerful tool in all of these areas

Higher Genus Curves in Mathematical Physics and Arithmetic Geometry Andreas Malmendier, Tony Shaska, 2018-04-03 This volume contains the proceedings of the AMS Special Session on Higher Genus Curves and Fibrations in Mathematical Physics and Arithmetic Geometry held on January 8 2016 in Seattle Washington Algebraic curves and their fibrations have played a major role in both mathematical physics and arithmetic geometry This volume focuses on the role of higher genus curves in particular hyperelliptic and superelliptic curves in algebraic geometry and mathematical physics The articles in this volume investigate the automorphism groups of curves and superelliptic curves and results regarding integral points on curves and their applications in mirror symmetry Moreover geometric subjects are addressed such as elliptic 3 surfaces over the rationals the birational type of Hurwitz spaces and links between projective geometry and abelian functions

Algebraic Structures And Number Theory - Proceedings Of The First International Symposium S P Lam, Kar Ping Shum, 1990-12-31 In this proceedings recent development on various aspects of algebra and number theory were discussed A wide range of topics such as group theory ring theory semi group theory topics on algebraic structures class numbers quadratic forms reciprocity formulae were covered

Using Algebraic Geometry David A Cox, John Little, Donal O'Shea, 2005-03-09 The discovery of new algorithms for dealing with polynomial equations and their implementation on fast inexpensive computers has revolutionized algebraic geometry and led to exciting new applications in the field This book details many uses of algebraic geometry and highlights recent applications of Grobner bases and resultants This edition contains two new sections a new chapter updated references and many minor improvements throughout
