Continuous Selections of Multivalued Mappings D. Repovš, P.V. Semenov, 2013-04-17 This book is dedicated to the theory of continuous selections of multi valued mappings a classical area of mathematics as far as the formulation of its fundamental problems and methods of solutions are concerned as well as a new area which has been intensively developing in recent decades and has found various applications in general topology theory of absolute retracts and infinite dimensional manifolds geometric topology fixed point theory functional and convex analysis game theory mathematical economics and other branches of modern mathematics The fundamental results in this theory were laid down in the mid 1950 s by E Michael The book consists of relatively independent three parts Part A Theory Part B Results and Part C Applications We shall refer to these parts simply by their names The target audience for the first part are students of mathematics in their senior year or in their first year of graduate school who wish to get familiar with the foundations of this theory The goal of the second part is to give a comprehensive survey of the existing results on continuous selections of multivalued mappings It is intended for specialists in this area as well as for those who have mastered the material of the first part of the book In the third part we present important examples of applications of continuous selections We have chosen examples which are sufficiently interesting and have played in some sense key role in the corresponding areas of mathematics Recent

Topological Fixed Point Theory of Multivalued Mappings Lech Górniewicz, 2006-06-03 This book is an attempt to give a systematic presentation of results and methods which concern the fixed point theory of multivalued mappings and some of its applications In selecting the material we have restricted ourselves to studying topological methods in the fixed point theory of multivalued mappings and applications mainly to differential inclusions Thus in Chapter III the approximation on the graph method in fixed point theory of multivalued mappings is presented Chapter IV is devoted to the homological methods and contains more general results e.g. the Lefschetz Fixed Point Theorem the fixed point index and the topological degree theory In Chapter V applications to some special problems in fixed point theory are formulated Then in the last chapter a direct applications to differential inclusions are presented Note that Chapters I and II have an auxiliary character and only results connected with the Banach Contraction Principle see Chapter II are strictly related to topological methods in the fixed point theory In the last section of our book see Section 75 we give a bibliographical guide and also signal some further results which are not contained in our monograph The author thanks several colleagues and my wife Maria who read and commented on the manuscript These include J Andres A Buraczewski G Gabor A Gorka M Górniewicz S Park and A Wieczorek The author wishes to express his gratitude to P Konstanty for preparing the electronic version of this monograph

Fixed Point Theory for Decomposable Sets Andrzej Fryszkowski, 2006-02-21 Decomposable sets since T R Rockafellar in 1968 are one of basic

notions in nonlinear analysis especially in the theory of multifunctions A subset K of measurable functions is called decomposable if Q for all and measurable A This book attempts to show the present stage of decomposable analysis from the point of view of fixed point theory The book is split into three parts beginning with the background of functional analysis proceeding to the theory of multifunctions and lastly the decomposability property Mathematicians and students working in functional convex and nonlinear analysis differential inclusions and optimal control should find this book of interest A good background in fixed point theory is assumed as is a background in topology

Nonlinear Operator Theory in Abstract Spaces and Applications Yu Qing Chen, Yeol Je Cho, 2004 This book primarily deals with non linear operator theory in topological vector spaces and applications Recently non linear functional analysis has become a main field of mathematics which has played an important role in physics mechanics and engineering operations research and economics and many others for the past few decades The book presents a survey of some main ideas concepts methods and applications in non linear functional analysis

Parametric Optimization and Approximation PARAMETRIC, BROSIOWSKI, DEUTSCH, 2013-11-21

Geometric Aspects of General Topology Katsuro Sakai, 2013-07-22 This book is designed for graduate students to acquire knowledge of dimension theory ANR theory theory of retracts and related topics These two theories are connected with various fields in geometric topology and in general topology as well Hence for students who wish to research subjects in general and geometric topology understanding these theories will be valuable Many proofs are illustrated by figures or diagrams making it easier to understand the ideas of those proofs Although exercises as such are not included some results are given with only a sketch of their proofs Completing the proofs in detail provides good exercise and training for graduate students and will be useful in graduate classes or seminars Researchers should also find this book very helpful because it contains many subjects that are not presented in usual textbooks e g $\dim X \neq \dim X + 1$ for a metrizable space X the difference between the small and large inductive dimensions a hereditarily infinite dimensional space the ANR ness of locally contractible countable dimensional metrizable spaces an infinite dimensional space with finite cohomological dimension a dimension raising cell like map and a non AR metric linear space The final chapter enables students to understand how deeply related the two theories are Simplicial complexes are very useful in topology and are indispensable for studying the theories of both dimension and ANRs There are many textbooks from which some knowledge of these subjects can be obtained but no textbook discusses non locally finite simplicial complexes in detail So when we encounter them we have to refer to the original papers For instance J H C Whitehead's theorem on small subdivisions is very important but its proof cannot be found in any textbook The homotopy type of simplicial complexes is discussed in textbooks on algebraic topology using CW complexes but geometrical arguments using simplicial complexes are rather easy

Operations Research, Engineering, and Cyber Security Nicholas J. Daras, Themistocles M. Rassias, 2017-03-14 Mathematical methods and theories with interdisciplinary applications are presented in this book The eighteen contributions presented in this Work have been

written by eminent scientists a few papers are based on talks which took place at the International Conference at the Hellenic Artillery School in May 2015 Each paper evaluates possible solutions to long standing problems such as the solvability of the direct electromagnetic scattering problem geometric approaches to cyber security ellipsoid targeting with overlap non equilibrium solutions of dynamic networks measuring ballistic dispersion elliptic regularity theory for the numerical solution of variational problems approximation theory for polynomials on the real line and the unit circle complementarity and variational inequalities in electronics new two slope parameterized achievement scalarizing functions for nonlinear multiobjective optimization and strong and weak convexity of closed sets in a Hilbert space divGraduate students scientists engineers and researchers in pure and applied mathematical sciences operations research engineering and cyber security will find the interdisciplinary scientific perspectives useful to their overall understanding and further research

Topological Methods in Differential Equations and Inclusions Andrzej Granas, Marlène Frigon, 2012-12-06

The papers collected in this volume are contributions to the 33rd session of the Seminaire de Mathematiques Superieures SMS on Topological Methods in Differential Equations and Inclusions This session of the SMS took place at the Universite de Montreal in July 1994 and was a NATO Advanced Study Institute ASI The aim of the ASI was to bring together a considerable group of young researchers from various parts of the world and to present to them coherent surveys of some of the most recent advances in this area of Nonlinear Analysis During the meeting 89 mathematicians from 20 countries have had the opportunity to get acquainted with various aspects of the subjects treated in the lectures as well as the chance to exchange ideas and learn about new problems arising in the field The main topics treated in this ASI were the following Fixed point theory for single and multi valued mappings including topological degree and its generalizations and topological transversality theory existence and multiplicity results for ordinary differential equations and inclusions bifurcation and stability problems ordinary differential equations in Banach spaces second order differential equations on manifolds the topological structure of the solution set of differential inclusions effects of delay perturbations on dynamics of retarded delay differential equations dynamics of reaction diffusion equations non smooth critical point theory and applications to boundary value problems for quasilinear elliptic equations

Topics in Fixed Point Theory Saleh Almezal, Qamrul Hasan Ansari, Mohamed Amine Khamsi, 2013-10-23

The purpose of this contributed volume is to provide a primary resource for anyone interested in fixed point theory with a metric flavor The book presents information for those wishing to find results that might apply to their own work and for those wishing to obtain a deeper understanding of the theory The book should be of interest to a wide range of researchers in mathematical analysis as well as to those whose primary interest is the study of fixed point theory and the underlying spaces The level of exposition is directed to a wide audience including students and established researchers Key topics covered include Banach contraction theorem hyperconvex metric spaces modular function spaces fixed point theory in ordered sets topological fixed point theory for set valued maps coincidence theorems Lefschetz

and Nielsen theories systems of nonlinear inequalities iterative methods for fixed point problems and the Ekeland's variational principle

Fractional Difference, Differential Equations, and Inclusions Saïd Abbas, Bashir Ahmad, Mouffak Benchohra, Abdelkrim Salim, 2024-01-11

The field of fractional calculus FC is more than 300 years old and it presumably stemmed from a question about a fractional order derivative raised in communication between L Hopital and Leibniz in the year 1695 This branch of mathematical analysis is regarded as the generalization of classical calculus as it deals with the derivative and integral operators of fractional order The tools of fractional calculus are found to be of great utility in improving the mathematical modeling of many natural phenomena and processes occurring in the areas of engineering social natural and biomedical sciences Fractional Difference Differential Equations and Inclusions Analysis and Stability is devoted to the existence and stability Ulam Hyers Rassias stability and asymptotic stability of solutions for several classes of functional fractional difference equations and inclusions Some equations include delay effects of finite infinite or state dependent nature Others are subject to impulsive effect which may be fixed or non instantaneous The tools used to establish the existence results for the proposed problems include fixed point theorems densifiability techniques monotone iterative technique notions of Ulam stability attractivity and the measure of non compactness as well as the measure of weak noncompactness All the abstract results are illustrated by examples in applied mathematics engineering biomedical and other applied sciences Introduces notation definitions and foundational concepts of fractional q calculus Presents existence and attractivity results for a class of implicit fractional q difference equations in Banach and Fréchet spaces Focuses on the study of a class of coupled systems of Hilfer and Hilfer Hadamard fractional differential equations

Evolution Inclusions and Variation Inequalities for Earth Data Processing I Mikhail Z. Zgurovsky, Valery S. Mel'nik, Pavlo O. Kasyanov, 2010-10-01

Here the authors present modern mathematical methods to solve problems of differential operator inclusions and evolution variation inequalities which may occur in fields such as geophysics aerohydrodynamics or fluid dynamics For the first time they describe the detailed generalization of various approaches to the analysis of fundamentally nonlinear models and provide a toolbox of mathematical equations These new mathematical methods can be applied to a broad spectrum of problems Examples of these are phase changes diffusion of electromagnetic acoustic vibro hydro and seismoacoustic waves or quantum mechanical effects This is the first of two volumes dealing with the subject
