

COORDINATION COMPLEXES OF COBALT

100

[illegible]

The propagation of α - β -unsaturated carbonyl compounds is carried out most conveniently using these $\text{Ti}(\text{O}i\text{Pr})_4$ - $\text{Ti}(\text{O}n\text{Bu})_4$ complexes in the presence of other unsaturated ketone compounds to achieve the best results (1:1 for the 1:1 molar ratio). The reaction mixture is stirred at room temperature for 24 h, as has previously been reported. The reaction is then quenched with methanol and the mixture is extracted with diethyl ether. The organic phase is dried over anhydrous sodium sulfate and concentrated under reduced pressure. The residue is purified by column chromatography (10% Et_2O in hexane) to give the pure α,β -unsaturated ketone. The yield of the product is typically 80–90%.
