

Chapter 9

Activity-Based Costing

Solutions to Review Questions

9-1.

Common allocation bases are direct labor-hours, direct labor costs, and machine-hours. Somewhat less common is direct material costs.

9-2.

False. Department allocation is a two-stage process, so the first-stage assignment of costs and the choice of cost drivers affects the allocation of costs to products. The total product costs are the same under either approach, but the individual product costs differ. This can affect the decisions managers make regarding individual products.

9-3.

Most companies produce multiple products and simply adding them up does not account for differences in complexity of the use of resources. As an extreme example, suppose a company produced airplanes and staplers. Allocating overhead on the basis of units would assign the same overhead cost to a stapler and a plane.

9-4.

The costs include the systems and the software, but the most important cost is managers' time. Managers need to make many decisions about the activities and the cost drivers and managers need to make many of the first-stage allocations. The benefits come from having better information about the use of resources and better information for decisions.

9-5.

1. Identify activities that consume resources.
2. Identify the cost driver associated with each activity.
3. Compute a cost rate per activity unit (e.g., rate per setup, rate per part, rate per machine-hour).
4. Allocate costs to products by multiplying the activity rate times the volume of activity consumed by the product.

Baker, Paula A.

Daniels, 2021-06-22 This book explains how True Cost Accounting is an effective tool we can use to address the pervasive imbalance in our food system Calls are coming from all quarters that the food system is broken and needs a radical transformation A system that feeds many yet continues to create both extreme hunger and diet related diseases and one which has significant environmental impacts is not serving the world adequately This volume argues that True Cost Accounting in our food system can create a framework for a systemic shift What sounds on the surface like a practice

relegated to accountants is ultimately a call for a new lens on the valuation of food and a new relationship with the food we eat starting with the reform of a system out of balance From the true cost of corn rice and water to incentives for soil health the chapters economically compare conventional and regenerative more equitable farming practices in and food system structures including taking an unflinching look at the true cost of cheap labour Overall this volume points towards the potential for our food system to be more human centred than profit centred and one that has a more respectful relationship to the planet It sets forth a path forward based on True Cost Accounting for food This path seeks to fix our current food metrics in policy and in practice by applying a holistic lens that evaluates the actual costs and benefits of different food systems and the impacts and dependencies between natural systems human systems agriculture and food systems This volume is essential reading for professionals and policymakers involved in developing and reforming the food system as well as students and scholars working on food policy food systems and sustainability

Accounting for Value in Marx's Capital Robert Bryer, 2017-09-07 Many scholars discuss Marx's Capital from many perspectives but Accounting for Value uniquely advances and defends an accounting interpretation of his theory of value that he used it to explain capitalists accounts It confirms and builds on the Temporal Single System Interpretation's refutation of the charge that Marx's illustration of the transformation from values to prices is inconsistent and its defense of his Law of the Tendency of the Rate of Profit It rejects other interpretations by showing that only a temporal single system interpretation is consistent with Marx's accounting The book shows that Marx became seriously interested in accounts from the late 1850s during an important period in the development of his critique of political economy asking Engels for information and explanations Examining their letters in the context of Marx's evolving work it argues supports the hypothesis that discovering he could explain them with his theory of value gave him the breakthrough he needed to decide how to present his work and explains why in 1862 he decided to change its title to Capital Marx's explanations of capitalist accounting it concludes amount to an accounting theory that explains how individual capitalists and the capital market use what is for many the invisible hand of accounting to control the production and distribution of surplus value Marx claimed his theory of value was a work of science a critique of political economy that would deliver a theoretical blow from which the bourgeoisie would never recover He failed critics argue because his critique depends on hypothetical entities which we cannot directly observe such as value and abstract labour surplus value which means his theory is not open to empirical refutation The book however argues that he used his theory of value to explain the phenomenal forms of profit rate of profit etc by explaining the observable accounting principles and practices capitalists use to calculate and control them in which as he said we can glimpse the determination of value by socially necessary labor time which experience could have refuted
