Machine Learning for Finance and Investing Deepak K. Kanungo,2023-08-14 There are several reasons why probabilistic machine learning represents the next generation ML framework and technology for finance and investing This generative

ensemble learns continually from small and noisy financial datasets while seamlessly enabling probabilistic inference retrodiction prediction and counterfactual reasoning Probabilistic ML also lets you systematically encode personal empirical and institutional knowledge into ML models Whether they re based on academic theories or ML strategies all financial models are subject to modeling errors that can be mitigated but not eliminated Probabilistic ML systems treat uncertainties and errors of financial and investing systems as features not bugs And they quantify uncertainty generated from inexact inputs and outputs as probability distributions not point estimates This makes for realistic financial inferences and predictions that are useful for decision making and risk management Unlike conventional AI these systems are capable of warning us when their inferences and predictions are no longer useful in the current market environment By moving away from flawed statistical methodologies and a restrictive conventional view of probability as a limiting frequency you ll move toward an intuitive view of probability as logic within an axiomatic statistical framework that comprehensively and successfully quantifies uncertainty This book shows you how

The purpose of the WEBIST series of conferences is to bring together researchers, engineers, and practitioners interested in the technological advances and business applications of web-based information systems. The series focuses on four main topic areas covering different aspects of web information systems, including internet technology, web interfaces and applications, society, e-business, and e-government, and e-learning. WEBIST 2008 received 238 paper submissions from more than 40 countries on all continents. A double-blind review process was enforced with the help of more than 200 experts from the international Program Committee, each of them specialized in one of the main conference topic areas. After reviewing, 32 papers were selected to be published and presented as full papers, and 64 additional papers describing work progress as short papers for oral presentation only. Furthermore, 58 papers were presented as posters. The full paper acceptance ratio was 13% and the total oral paper acceptance ratio was 40%. Therefore, we hope that you find the papers included in this book interesting and we trust they may represent a helpful reference in the future for all those who need to address any of the research areas mentioned above.
